Linux

[\$] Beyond the &

Source: *LWN.net*

Rust has a number of kinds of smart pointers, both in the standard library and defined by users. Still, some operations that are possible with built-in references are not possible to perform with user-defined smart pointers. Tyler Mandry, lead of the Rust project's language team , spoke at RustConf...

Linux Test Project suite stable release for September 2026

Source: *LWN.net*

The Linux Test Project has announced its latest stable release for September 2026. There have been 382 patches from 41 authors since the May 2026 release . See the announcement for a list of new tests, changes, and more.

Security updates for Friday

Source: *LWN.net*

Security updates have been issued by AlmaLinux (dogtag-pki, expat, freerdp, gawk, gdb, ghostscript, gvfs, kernel, kernel-rt, libpcap, openssh, pki-core, rsync, thunderbird, and webkit2gtk3), Debian (chromium, firefox-esr, libio-compress-perl, libpng1.6, nodejs, open-iscsi, redis, thunderbird, and we...

What enterprises need to know about the software they depend on

Source: *Red Hat Blog*

Knowing an application contains open source components is not the same as understanding the software and communities behind them. For many organizations, the software supply chain extends across thousands of dependencies, developed and maintained by communities, foundations, vendors, and individual c...

What enterprises need to know about the Cyber Resilience Act and software supply chain risk

Source: *Red Hat Blog*

In part 1 of this series, we examined why enterprises need more than an inventory of the open source components in their software. Understanding where

dependencies come from, whether they are maintained, how they handle vulnerabilities, and what options exist when problems emerge is increasingly imp...

Stay ahead of change: Proactive email reports for Red Hat Lightspeed planning for RHEL

Source: Red Hat Blog

Traditionally, reviewing Red Hat Enterprise Linux (RHEL) lifecycle dates meant logging into the Hybrid Cloud Console, navigating to the Red Hat Lightspeed planning dashboard, and skimming through the lifecycle and digital roadmap pages yourself. Earlier this year, we introduced the Red Hat Lightspee...

RHCOS 10 - Red Hat's new worker node OS for OpenShift

Source: Red Hat Blog

ContextRed Hat OpenShift uses a purpose-built, immutable operating system for cluster nodes, commonly known as Red Hat Enterprise Linux CoreOS (RHCOS). This operating system, which uses the same kernel and hardware compatibility from Red Hat Enterprise Linux (RHEL), ships with a minimal-footprint op...

What's Happening In KDE Remote Desktop - Improved Unattended Mode and More

Source: David Edmundson's Blog

Remote desktop has been one of the weaker areas of the transition to Wayland. There's a lot of software written exclusively for X that has a direct Wayland equivalent. Within KDE, we already have a Plasma-native RDP and VNC solution for Wayland, but we're aware that it hasn't yet reached the level w...

Wayland pain points - kgamma

Source: David Edmundson's Blog

In the feedback about dropping X11 support, one very surprisingly common comment is from users saying they "need" kgamma, a simple tool that allows the user to adjust the gamma, red, blue and green that gets drawn to the screen operating directly on the X server. On our Wayland session we have colou...

Techpaladin are hiring!

Source: David Edmundson's Blog

If you've been around KDE, you've probably heard of Techpaladin Software We're a consultancy that works almost exclusively on KDE, improving KDE upstream while delivering the features and functionality our clients need. We're growing and looking for more developers to join the team. We're after expe...

EX-11: Prepping for Plasma's Last X11-Supported Release

Source: David Edmundson's Blog

When we first announced the transition to Plasma Wayland, one of Martin's slides from stated, "It's done when it's done!" That talk was 15 years ago! Nothing in software is never truly "done", but as announced previously we are finally at a point where we're ready to retire the X11 and put all our f...

Update on KDE Home Automation (KIOT)

Source: David Edmundson's Blog

This is a effectively a guest blogpost where I, as usual, take the credit for the work someone else has done. Last year ago set out making a home automation <--> Desktop Linux bridge over the Christmas holidays. The idea is that if you're using home automation your PC that you're in front of has ... C...

Setting up distributed compilations with sccache

Source: David Edmundson's Blog

I hate waiting for compilations. For day-to-day it may only be a minute or two, but once you start doing another task, the context switching distracts from what you were doing before and breaks everything up. Life is too short to be waiting for computers. Obviously the first answer is to have a fast...

Introducing QtVarlink

Source: David Edmundson's Blog

I'm writing this blog in the very very early stages of development because I'm 50% sure someone will link me to some existing library that Google failed to find. Varlink Varlink is an IPC mechanism that is gaining popularity in a few places across Linux. It's very simple, JSON blobs over a socket te...

Upcoming changes to Activities in Plasma 6.5

Source: David Edmundson's Blog

Activities' future is a bit unclear at the moment. It overlaps with functionality provided by other services and the user story for how it fits into the desktop is unclear at best. However we also have to acknowledge that some people use activities to create a workflow that works for them. Rather th...

A Roadmap for a modern Plasma Login Manager

Source: David Edmundson's Blog

Plasma's login experience is an area that we know requires some improvement — it works OK in the basic case, but it's very barebones and doesn't handle anything

beyond that. As a complete desktop experience, it's our job to provide support for the edge cases too. What we want Great out-of-box experi...

Adding Home Automation to KDE

Source: David Edmundson's Blog

About Home Automation is mostly, as the name implies, about automation. The machine you're in front of all work-day has an awful lot of useful information that can be useful in your home management. I have a script lower my blinds if I turn on the camera during the afternoon as otherwise there's an...

This Is What Happens When Corporations Own Open Source

Source: SavvyNik

An open source project just got bought out and shut down. Siemens decided to shut down a github repo and didn't even bother archiving it. This is what happens when Corps own Open Source project. Will this keep happening and what do we do? My Linux Bundle is here: <https://savvynik.com> Think your Re...

GitLab Patches Critical 9.9 AI Gateway Flaw Allowing Command Execution on Self-Hosted Servers

Source: The Hacker News

A critical flaw in GitLab's AI Gateway could let a logged-in user with Duo Agent Platform access run commands on the gateway under certain conditions, GitLab said in an advisory. The gateway is the service that connects a GitLab instance to AI models, and only organizations that host their own gatew...

Antino Backdoor Uses Outlook and OneDrive for C2 in China-Nexus Espionage Campaign

Source: The Hacker News

Government and policy organizations across Asia have become the target of a new campaign orchestrated by a China-nexus threat actor. The activity, which has targeted government and policy organizations in Taiwan, India, the Philippines, Cambodia, Pakistan, Thailand, and Myanmar, involves the deploym...

Dell CSM Flaws Enable Unauthenticated Admin Access and Root on Kubernetes Nodes

Source: The Hacker News

Dell has released security updates to address multiple critical security flaws in Dell Container Storage Modules (CSM) that could be exploited by bad actors to take over susceptible systems. The vulnerabilities are listed below - CVE-2026-63688 (CVSS score: 10.0) - A missing authentication for criti...

OpenAI Parts Ways With Three Safety Researchers Over Sensitive Information Mishandling

Source: The Hacker News

OpenAI has parted ways with three members of its safety team after they leaked private information in violation of company policies, The Wall Street Journal reported. "We have parted ways with three individuals for violating our policies on accessing and handling sensitive company information," a sp...

Why CISOs Struggle to Answer the Board's Three Hardest Questions, and How to Fix the Report

Source: The Hacker News

The quarterly board meeting is two weeks out. The security team is pulling exports from the identity provider, the cloud posture tool, the vulnerability scanner, the SIEM and the EDR console. Someone is building a spreadsheet to reconcile them. Someone else is turning that spreadsheet into slides. T...
