Robinson: Raspberry Pi 5 on Fedora

Source: LWN.net

> Peter Robinson has written a blog post about the current state of Fedora support for Raspberry Pi 5 devices. According to Robinson, the upcoming Fedora 45 release will work—with caveats—on all variants of the Raspberry Pi Model 5B; the Compute Module 5 and Pi 500+ are still works in progress. For Fe...

[$] Guidelines for panics in kernel code

Source: LWN.net

> Alexandre Courbot spends most of his time working on the kernel doing code reviews. Recently, he's been wondering about what the standards should be for when Rust code is allowed to panic, and how it should do error handling more generally. Unlike many of the other talks at Kangrejos 2026, his talk...

Security updates for Tuesday

Source: LWN.net

> Security updates have been issued by AlmaLinux (bind, bind9.18, brotli, buildah, container-tools:4.0, container-tools:rhel8, firefox, flatpak, freeipmi, gcc, golang, grafana, httpd, kernel, kernel-rt, libreswan, libX11, lrzsz, nodejs:14, nodejs:18, oci-seccomp-bpf-hook, podman, python-urllib3, pytho...

AI agent security with policy-driven access control

Source: Red Hat Blog

> Agentic AI deployments are accelerating across enterprises. Recent research from the Cloud Security Alliance shows 70% of organizations now have AI components in production, yet 82% lack real-time visibility into AI runtime behavior. Furthermore, only 21% of organizations maintain a real-time invent...

Anthropic's Unreleased AI Model Chains Flaws Into Working Chrome, Safari, Windows and Linux Exploits

Source: The Hacker News

> An unreleased Anthropic AI model found security flaws in Chrome, Safari, Android, Windows, and Linux and chained them into working proof-of-concept exploits, the company said in its latest report. The exploits were built in the lab after the model was prompted, not seen in any real attack, and Anthr...

FBI Seizes Virtualine Domain Over Alleged Criminal Hosting and Bitcoin Money Laundering

Source: The Hacker News

> The U.S. Department of Justice (DoJ) on Tuesday announced the seizure of a domain associated with a bulletproof hosting provider (BPH) named Virtualine. The move was in response to the service being used to commit and facilitate prolific criminal activity, including "the advertisement of sexually ex...

Japan's GMO Offers $1 Million Bounty to Catch Hackers Behind FX Trading Cloud Breach

Source: The Hacker News

> Japan's GMO Internet Group is offering up to $1 million in total for tips that help catch the attackers who breached its Onamae.com Desktop Cloud service, after refusing to pay an extortion demand. The reward program opened on October 28 and pays only if a tip helps lead to an arrest or an internati...

Tailscale Patches SSH Flaws That Could Let Hacked Devices Gain Root Access on Other Servers

Source: The Hacker News

> Tailscale has released version 1.104.4 to fix flaws in its built-in SSH server that could let an attacker reach services and files on other servers that only the root user should be able to touch. The flaws are in how Tailscale SSH forwards network connections, a job the Tailscale background process...

ShinyHunters-Exploited Oracle PeopleSoft Zero-Day Turns Out to Be Three Chained Flaws

Source: The Hacker News

> The critical Oracle PeopleSoft bug that ShinyHunters has exploited since May is not one flaw but three chained together, the researchers who reported it said this week. Oracle patched all three under a single identifier, CVE-2026-35273, in June. Its root is a server-side request forgery (SSRF) that...

Adobe Commerce PolyShell Attacks Breach Hundreds of Stores as Brotli Exploit Traffic Emerges

Source: The Hacker News

> The U.S. Cybersecurity and Infrastructure Security Agency (CISA) on Tuesday added two vulnerabilities impacting Adobe Commerce and Magento, and Google's Brotli decoder library to its Known Exploited Vulnerabilities (KEV) catalog, citing evidence of active exploitation. The vulnerabilities are listed...

CyberStrikeAI Uses 44 AI Agents to Automate Hacking Operations Against Japan Targets

Source: The Hacker News

> Cybersecurity researchers have disclosed details of three cyber attacks targeting organizations in Japan in which artificial intelligence (AI) was a key element, either in the driving seat or to assist a human operator. TrendAI, which analyzed three exposed server environments used by threat actors...

GoAhead TLS Flaws Allow Revoked Client Certificates and Enable Session Decryption

Source: The Hacker News

> The GoAhead embedded web server loaded a certificate revocation list into its default TLS backend but never turned revocation checking on, so a revoked client certificate could still pass login on affected setups. The flaw is in builds that use the OpenSSL backend with mutual-TLS, where the server c...

Apple Backports Fix for Exploited CoreGraphics Flaw to Older iPhones and iPads

Source: The Hacker News

> Apple on Monday backported fixes for a high-severity security flaw that was exploited in real-world cyber attacks to older devices. The vulnerability, tracked as CVE-2026-86950 (CVSS score: 8.8), is an out-of-bounds write affecting CoreGraphics that could result in arbitrary code execution when proc...

Microsoft Authenticator Flaw Let Permissionless Android Apps Steal Work Account Tokens

Source: The Hacker News

> Microsoft has fixed a flaw in its Authenticator app for Android that let a malicious app with no permissions pose as a trusted Microsoft app, such as Teams, and collect sign-in tokens for a victim's work account. Microsoft tracks the flaw as CVE-2026-80097 and fixed it in Authenticator for Android v...

Keystone to Destroy 18,835 Hardware Wallets After Hackers Steal Device Verification Key

Source: The Hacker News

> An attacker who gained access to Keystone's website obtained the key that its hardware wallets use to prove they are genuine, the company said in a statement on October 26. Someone with that key could build counterfeit devices that pass the online check owners use to verify a Keystone. A buyer who t...

AI-Generated Fake Login Pages Are Making Account Takeovers Easier

Source: The Hacker News

> Fake login pages are nothing new, but generative AI is making them easier to build and more convincing. Attackers can recreate familiar login screens, impersonate trusted brands and tailor phishing attempts to specific employees or organizations. Some fake login pages go beyond stealing passwords. T...

Lazarus Abuses South Korean Security Software to Deploy Malware Using Post-Quantum Encryption

Source: The Hacker News

> The North Korea-linked Lazarus Group has been attributed to a cyber espionage campaign dubbed Operation FlashHole targeting at least three organizations in South Korea spanning the construction, software, and wire-communication equipment manufacturing sectors. According to Russian cybersecurity comp...
