[$] Python's experimental JIT to be removed

Source: LWN.net

> Python's experimental just-in-time (JIT) compiler , which was added to CPython in 2024 for the 3.13 release , is on its way out. In June, the Python steering council announced that it was pausing work on the JIT in CPython's main branch until there was an accepted Python Enhancement Proposal (PEP) t...

Two stable kernels for Monday

Source: LWN.net

> Greg Kroah-Hartman has announced the release of the 7.2.13 and 6.18.59 stable kernels. Each contains a number of fixes throughout the tree. Users are advised to upgrade.

Systemd adds support for components written in Rust

Source: LWN.net

> Christian Brauner has announced that he has merged support for writing leaf components of systemd in Rust. Rust will be used only for new leaf components, existing code is not being ported to Rust and nothing that other components depend on is written in Rust. Brauner said that the project would lik...

Security updates for Monday

Source: LWN.net

> Security updates have been issued by AlmaLinux (ca-certificates, cockpit-machines, container-tools:4.0, expat, flute, libbase, libfonts, libformula, liblayout, libloader, libreoffice, librepository, libserializer, pentaho-libxml, pentaho-reporting-flow-engine, and sac, golang-github-openprinting-ipp...

Securing the enterprise software supply chain in the AI era

Source: Red Hat Blog

> Across Europe, the Middle East, and Africa (EMEA), enterprise IT is undergoing a fundamental shift. Artificial intelligence (AI) is no longer restricted to isolated sandboxes or pilot projects. Autonomous AI agents, embedded software-as-a-service (SaaS) features, and automated workflows are actively...

Enterprise AI needs a data strategy, not just a model strategy

Source: Red Hat Blog

> Many enterprise AI conversations start with the same question: Which model should we use? With models becoming more and more commoditized, the big differentiator is whether your data is ready for any model or any agent to use.The stakes are higher now that AI agents are expected to autonomously disc...

Responsible disclosure in the age of Vulnpocalypse

Source: Red Hat Blog

> New tools can find potential flaws faster than teams can assess and fix them. When a serious flaw is discovered, the central challenge is ensuring maintainers, distributors, and operators receive the clear information and time necessary to defend their users.While AI-assisted research surfaces poten...

MLOps for edge AI: Keeping models accurate over time

Source: Red Hat Blog

> If you followed Part 1, Part 2, and Part 3 of this edge AI machine learning operations (MLOps) series, you've seen how a model goes from training and optimization through packaging, signing, and deployment across an edge fleet. We've reached a point where the model is now running and responding to i...

Australia Gets Into Amadey Malware Backend, Cuts Off Access to 180,000 Infected Computers

Source: The Hacker News

> A criminal using the Amadey malware can no longer access or steal data from 180,000 infected computers around the world, including some in Australia, the Australian Signals Directorate (ASD) says. The agency's operators gained access to the criminal's operation's backend and cut it off from those co...

OpenAI Compaction Flaw Let Researchers Bypass Hidden Reasoning Protections

Source: The Hacker News

> OpenAI's compaction feature, which shrinks a long conversation to save space, could be turned into a way to copy a model's hidden reasoning out in plain text, security firm Xint has shown. OpenAI's reasoning models work through a problem before answering, and the service normally returns only the ra...

Attackers Hijack Dahua IP Cameras in Ukraine Using P2P Access and Auth Weaknesses

Source: The Hacker News

> The Computer Emergency Response Team of Ukraine (CERT-UA) has issued an alert warning of unauthorized remote access to video surveillance systems manufactured by Dahua. "Cases of compromising IP cameras and DVRs with access to the video stream, changing the device configuration and creating third-pa...

CISA Confirms Active Exploitation of Two PHP2Shell Flaws Enabling Remote Code Execution

Source: The Hacker News

> The U.S. Cybersecurity and Infrastructure Security Agency (CISA) on Monday confirmed active exploitation of the recently patched PHP2Shell flaws by adding them to its Known Exploited Vulnerabilities (KEV) catalog. The PHP vulnerabilities, both rated 9.2 on the CVSS scoring system, facilitate unauthe...

Hackers Infect 953 Online Stores With Scanner-Evading JavaScript, Mostly on Magento

Source: The Hacker News

> An unknown threat actor has infected 953 online stores, most of them running Magento, as part of a long-running campaign active since July 2025. According to Dutch e-commerce security company Sansec, the activity is designed to add a small piece of code to the store's pages that, when visited by uns...

PHP Issues Second Windows Security Update in Five Days to Fix Brotli Code Execution Flaw

Source: The Hacker News

> PHP has rebuilt its official Windows packages for PHP 8.2 through 8.5 to fix CVE-2026-111497, a flaw in the Brotli compression library that the packages include. The flaw can let an attacker corrupt memory and potentially run code. PHP says the flaw can be reached through the cURL extension when the...

Attackers Use Microsoft Teams IT Support Scams to Deploy Malware and Ransomware

Source: The Hacker News

> Cybersecurity researchers are calling attention to what they say is a "recurring social engineering pattern" across hundreds of cases in which threat actors use Microsoft Teams' external chat creation feature to conduct impersonation scams or to deliver malware. "A consistent pattern of attacker beh...

Weekly Recap: This2Shell, That2Shell, Everything's an RCE? Rogue AI, Supply Chain Chaos and More

Source: The Hacker News

> This2Shell, That2Shell, Everything2Shell. That's pretty much how the last week went. Critical bugs that let attackers run code remotely are showing up everywhere. Hackers are scanning for targets, some flaws are already being used in attacks, and security teams have more urgent patches than they can...

Two Critical Wasmtime Flaws Could Let Malicious WebAssembly Modules Escape Sandboxes

Source: The Hacker News

> Two critical flaws in Wasmtime, a WebAssembly runtime that can be built into other software, could allow a malicious WebAssembly module to escape the sandbox intended to contain it, the project's maintainers say. An attacker would first need a vulnerable Wasmtime build to compile a module they contr...

Between alerts: What Attackers Do in the Spaces Ordinary Detection Misses

Source: The Hacker News

> Every SOC struggles with a pile of alerts. Very few of those alerts explain how an attack started or how it progressed. Network data, like that from a network detection and response (NDR) platform, connects individual alerts into one timeline, and it feeds the defensive systems that can tie all even...
