[$] Git considers voting to determine its LLM policy

Source: LWN.net

> One of the dominant themes of 2026 has been the debate within development projects about the terms under which LLM-written contributions should be accepted — if, indeed, they should be accepted at all. The Git project has not been immune to this trend; the topic was discussed at the recent Git Contr...

Kernel prepatch 7.4-rc2

Source: LWN.net

> Linus Torvalds has released the 7.4-rc2 prepatch and it will come as no surprise that it is a large one (" a big -rc2 to go with the largest ever -rc1 "). Much of the size was made up of some automated Coccinelle updates that were spread out all over the tree; once those are factored out, the rest l...

OpenIndiana 2026.10 released

Source: LWN.net

> Version 2026.10 of the OpenIndiana operating system has been released. OpenIndiana is based on Illumos , which in turn was based on OpenSolaris after Oracle discontinued it. Notable changes in this release include UEFI framebuffer support for the live image, updates to many applications and developm...

Security updates for Monday

Source: LWN.net

> Security updates have been issued by Debian (cjose, kernel, libreoffice, rsync, ruby3.3, telegram-desktop, vim, and zlib), Fedora (bind, composer, copyparty, dnf5, elixir, fasterxml-oss-parent, gnome-remote-desktop, goose, jackson-annotations, jackson-bom, jackson-core, jackson-databind, jackson-jax...

What’s new in Red Hat OpenShift 5

Source: Red Hat Blog

> Red Hat OpenShift 5 is now generally available. The Red Hat OpenShift team always tries to bring you the most requested features while, at the same time,

> pushing the envelope with new opportunities. You have environments combining containers, virtual machines (VMs), and AI workloads so with this rel...

Red Hat OpenShift 5: What partners need to know

Source: Red Hat Blog

> Red Hat OpenShift 5 is the next evolution of the cloud-native application platform you and your customers already trust.For distributors and resellers, Red Hat OpenShift 5 is more than a product release—it’s a growth opportunity: longer customer relationships, clearer lifecycle conversations, and im...

Red Hat OpenShift 5: The intelligent application platform

Source: Red Hat Blog

> Red Hat OpenShift 5 represents the next evolution of your core application platform. It maintains the foundations you rely on: A consistent operational model built on Kubernetes, supporting containers, virtual machines (VMs), serverless workloads, and AI across data centers, public clouds, and the e...

Red Hat OpenShift 5: Bring stronger security to applications and AI

Source: Red Hat Blog

> Every team wants to get AI models and modern apps into production quickly, but no platform engineer wants to gamble on unvetted code or leaky access boundaries. Red Hat OpenShift 5 is built to give platform and security teams the confidence to say "yes" to deployment without losing control. Alongsid...

Red Hat OpenShift 5 delivers innovation and predictability for the long haul

Source: Red Hat Blog

> The experimentation phase of the cloud-native era has entered its maturity phase. Red Hat OpenShift has become the common layer of consistency for the hybrid enterprise, connecting everything from sovereign data centers to the network edge to public cloud environments. But as Red Hat plans for the f...

Red Hat Developer Hub 2.1: Agent ready, extended support, new plugin architectures

Source: Red Hat Blog

> AI has made code generation significantly faster. However, without enterprise context, this new speed fails to translate to business outcomes. Lack of context creates a quality gap that is estimated to cost 3 to 10 times more per feature than a context engineering approach. Initial productivity gain...

Modernizing the enterprise: How virtualization trailblazers are building the future with Red Hat OpenShift

Source: Red Hat Blog

> Enterprise IT continues to undergo a massive structural shift. Escalating licensing costs, shifting cloud economics, and the urgent mandate to deploy AI-driven workloads are forcing platform leaders to fundamentally rethink their infrastructure strategies. To remain viable, businesses need forward-l...

How Red Hat OpenShift 5 transforms operations for Red Hat OpenShift Service on AWS

Source: Red Hat Blog

> To innovate at the pace that AI demands, platform teams need deeper security to protect workloads, intelligent automation to solve problems faster, and predictable lifecycles that make planning easier. Red Hat OpenShift 5 introduces advanced capabilities that reduce complexity for your Red Hat OpenS...

EnMaaS: Red Hat's pilot for open source inference

Source: Red Hat Blog

> As frontier model inference costs soar, Red Hat has addressed the challenge head-on by proving that enterprise-grade AI does not require exclusive reliance on expensive commercial endpoints. Through Engineering Model-as-a-Service (EnMaaS), our internal MaaS pilot deployed on Red Hat AI, we united Pr...

Binance Warns of iOS Sandbox Escape That Could Expose Crypto Wallet Keys, No Fix Confirmed

Source: The Hacker News

> An iOS sandbox escape published on GitHub lets an app read other apps' files on iPhones running iOS 26 and 27. That puts seed phrases, private keys, and login credentials at risk of exposure to malicious apps, Binance warned today. Apple's updates for iOS 26 and 27, released yesterday, do not list a...

Beyond the Alert: The Case for Rich Network Data

Source: The Hacker News

> At some point your security will fail. This isn’t pessimism. It’s not because your team and tools aren’t sophisticated enough. It’s the reason we have detections in the first place. And, it’s why once we accept that prevention has its limits, we arrive at an interdiction strategy: finding and disrup...

Apple Patches iMessage Group Chat Privacy Flaws and Bluetooth Pairing Vulnerabilities

Source: The Hacker News

> An iMessage flaw could let a remote attacker join a group chat and receive its messages, Apple said yesterday, and it released updates to fix it. The updates also fix a separate iMessage flaw that could let someone added to a group access messages sent before they joined. As of today, other updates...

Russian Turla Hackers Use New Cereal Malware to Steal Emails From Government Exchange Servers

Source: The Hacker News

> The Russia-aligned state-sponsored threat actor known as Turla (aka Snake) is wielding a previously undocumented cyber espionage toolset called Cereal that's used to break into victims' Microsoft Exchange servers with an aim to surreptitiously collect emails. According to an ESET report shared with...

SAP Patches Four CVSS 10.0 Flaws, Including Two Enabling Remote Code Execution

Source: The Hacker News

> Four flaws that attackers could exploit without logging in were fixed today as part of SAP's monthly Security Patch Day—the vendor rates all four 10.0, the maximum CVSS score. Three are in the SAP NetWeaver application server, the software SAP systems run on, and one is in the Web Dispatcher, which...

France Blames Iran for Sabotage Attack on Refrigeration Controllers at About 700 Retail Sites

Source: The Hacker News

> An October cyberattack on refrigeration controllers at about 700 French retail sites was carried out by a cyber unit of Iran's Islamic Revolutionary Guard Corps (IRGC), the French government said yesterday. The attackers broke into controllers on the night of October 11 and changed their defrost set...

Anthropic's Claude Fable 5.2 Beats GPT-6 Cyber in Multi-Stage Cyberattack Benchmark

Source: The Hacker News

> Anthropic on Monday released Claude Fable 5.2 and Claude Mythos 5.2 models, which it said exhibit improvements in coding, reasoning, and vision. During pre-release training, the large language models (LLMs) helped its engineers "complete otherwise-infeasible software migrations, designed three worki...

Google Issues Chrome Security Update for Eighth Actively Exploited Zero-Day of 2026

Source: The Hacker News

> Google on Monday released updates to patch nine security vulnerabilities, including one that has come under active exploitation in the wild. The high-severity vulnerability, assigned the CVE identifier CVE-2026-125350 (CVSS score: N/A), has been described as a use-after-free bug in the XML component...

N-able Takes N-central Cloud Offline After Researcher Discloses 33 Zero-Days with PoC Exploits

Source: The Hacker News

> N-able said it has taken N-central Hosted Environments offline and is urging on-premises customers to shut down their servers until further notice following the public disclosure of over 30 vulnerabilities collectively tracked as Able2Shell. "As a precautionary measure, we are temporarily taking our...

CISA Warns of Active Exploitation of OpenSSH, GPUStack, FreeSWITCH, and IBM Flaws

Source: The Hacker News

> The U.S. Cybersecurity and Infrastructure Security Agency (CISA) on Monday added four security flaws impacting GPUStack, SignalWire FreeSwitch, OpenBSD OpenSSH, and IBM Aspera Faspex to its Known Exploited Vulnerabilities (KEV) catalog, citing evidence of active exploitation. The vulnerabilities are...

Hackers Exploit Qubole's Trusted AWS Access to Breach Customer Accounts and Steal Data

Source: The Hacker News

> An attacker broke into AWS accounts belonging to multiple Qubole customers between October 14 and October 26 and stole stored secrets and data, cloud security company Wiz said today. The attacker used credentials for an AWS account that Qubole's platform uses to reach those customers. How the attack...

Hackers Compromise Ethersphere's bee-js and Swarm Desktop to Deliver Wallet-Stealing Malware

Source: The Hacker News

> Attackers used the Ethersphere project's own release automation to publish malicious versions of two of its tools for the Swarm decentralized storage network: bee-js 13.3.0 and Swarm Desktop 0.56.2. Both releases download and run code built to steal the wallet key that Swarm Desktop keeps for its no...

Bitter Hackers Deploy New PapRAT Backdoor in Cyberespionage Campaign Targeting South Asia

Source: The Hacker News

> The South Asian cyber espionage group known as Bitter (aka APT-C-08, APT-Q-37, Hazy Tiger, Orange Yali, T-APT-17, and TA397) has been observed targeting South Asian organizations with a previously unreported remote access trojan called PapRAT. "PapRAT has both C++ and Rust implementations," Fortinet...

Weekly Recap: SSHole Exploited, APT Root RCE, Robot Takeovers, 15K Hacked Sites, and More

Source: The Hacker News

> A system doesn't always need a complicated bug to let someone in. Sometimes, a blank password is enough. That's one of the bigger stories this week. And it gets worse when the tools meant to keep systems updated or running safely become part of the attack. Elsewhere, attackers are hiding inside norm...
