[\$] Deterministic testing for multithreaded Python

Source: *LWN.net*

Python's support for multithreaded programs has improved considerably over the last few years with the advent of the "free-threaded" version of the language . But testing multithreaded programs is notoriously difficult, because the underlying host system determines the thread-execution ordering, whi...

Grml 2026.09 released

Source: *LWN.net*

Version 2026.09 , code-named "Hättiwaritätti", of the Debian-based Grml live Linux distribution for system administrators has been released. It is based on packages from the upcoming Debian 14 ("forky") release. Notable changes include an update to the Linux 7.1.8 kernel, support for booting from ex...

Security updates for Friday

Source: *LWN.net*

Security updates have been issued by Debian (chromium, firefox-esr, and pcre2), Fedora (cockpit, expat, freeipa, kbd, kernel, mrtg, python-pip, and valkey), Mageia (libopenmpt and python-gitpython), Oracle (dbus-broker, freerdp, gegl, gegl04, gimp:2.8, go-fdo-client, go-fdo-server, golang-github-ope...

BTRFS boot failure and easy GUI methods for system recovery

Source: *Fedora Magazine*

A few short how-to's with screenshots, showing easy ways to boot up off a USB live ISO and return back to previous points in time with BTRFS

Modernizing virtualization in higher education: How automated node recovery protects data integrity

Source: *Red Hat Blog*

Organizations across higher education and enterprise sectors face rising virtualization costs, shifting licensing structures, and architectural decisions that can no longer be deferred. In this landscape, IT leaders need a low-disruption migration path that protects critical workloads today while es...

When hardware lead times stall your roadmap: How Red Hat OpenShift cloud services keep projects moving

Source: Red Hat Blog

Do you have projects blocked by hardware lead times or refresh delays? If the answer is yes, you are not alone. The explosive boom in AI has triggered global hardware shortages, leaving IT leaders facing volatile pricing and procurement timelines measured in months, not weeks. In many channels, serve...

DevOps

CPU + GPU: Why AI platform engineering is a heterogeneous infrastructure problem

Source: CNCF Blog

AI infrastructure conversations often start with GPUs. Accelerators provide much of the compute behind model training and inference, so the focus is understandable. But a production AI workload rarely starts and ends on a GPU. Data...

Kubernetes isn't new, but AI makes it scary again

Source: CNCF Blog

Kubernetes isn't brand new anymore. Yet, for many teams, adopting it still feels intimidating. Even if you've watched Kubernetes become the default foundation for production software and AI workloads, it can still feel like a big...

Kubernetes v1.37: KubeletInUserNamespace (aka Rootless mode) Graduates to Beta

Source: Kubernetes Blog

Kubernetes v1.37 promotes the KubeletInUserNamespace feature gate to beta. With this feature enabled, all of the node components (kubelet, CRI and OCI runtimes, CNI plugins, and kube-proxy) can run as a non-root user on the host, using a Linux user namespace. This technique is also known as rootless...

Project HydraFusion: Frontier quality via multi-model orchestration

Source: GitHub Blog

In controlled offline evaluations, HydraFusion's selective coding workflows matched or exceeded the evaluated Opus 5 baseline while reducing estimated workflow cost. Now available as a research preview in GitHub Copilot. The post Project HydraFusion: Frontier quality via multi-model orchestration ap...

“Sorry for the messy rollout”: OpenAI launches GPT-6 Astra to most paying users a day after its unveiling

Source: The New Stack

Update: As of 6:30 p.m. Eastern on Friday, September 4, GPT-6 Astra was available on ChatGPT for all paying users The post “Sorry for the messy rollout”: OpenAI launches GPT-6 Astra to most paying users a day after its unveiling appeared first on The New Stack .

Microsoft built a prompt injection detector. Then it caught a phishing campaign instead.

Source: The New Stack

Microsoft flagged a phishing campaign last week that exploits a gap in how machines read text. Attackers are slipping invisible The post Microsoft built a prompt injection detector. Then it caught a phishing campaign instead. appeared first on The New Stack .

OpenAI will sell you Astra, but not the system that scored 98.6% on ARC-AGI-3

Source: The New Stack

Investor Matt Turck, whose fantastic podcast has hosted the people who built ARC-AGI, summed up Astra’s blockbuster benchmarks with three The post OpenAI will sell you Astra, but not the system that scored 98.6% on ARC-AGI-3 appeared first on The New Stack .

Thousands of OpenAI Agents Quietly Turned an Abandoned Wiki Into Their Coordination Channel

Source: *The Hacker News*

A group of AI safety researchers says a fleet of autonomous agents that identified themselves as OpenAI systems left about 18,000 posts on a dormant 25-year-old German wiki between May and July 2026, using the site as a shared board to pool answers to a timed web task and pass around a way out of th...

Attackers Exploit PaperCut Flaws to Steal Credentials From Schools and Universities

Source: *The Hacker News*

Threat actors are exploiting the newly disclosed PaperCut flaws to facilitate credential theft in attacks targeting the education sector in the U.S. and Europe. The Arctic Wolf Adversary Research Team said it observed attackers exploiting CVE-2026-81578 and CVE-2026-82078 – an authentication bypass...

Phishing Campaign Sends Millions of Emails Using Invisible Unicode to Evade Filters

Source: *The Hacker News*

Microsoft is alerting of a "high-volume phishing campaign" that's using invisible Unicode tag characters to bypass email filters. "Instead of using these characters to hide instructions from people while exposing them to AI models, the attacker used them to split financial lure words such as 'fundin..."

PostgreSQL Fixes 12-Year-Old Logical Decoding Flaw Enabling Replication-Role Code Execution

Source: *The Hacker News*

PostgreSQL has released updates to address a security flaw that allows an account with the REPLICATION attribute to run arbitrary code as the operating-system user running the database server. The flaw, tracked as CVE-2026-6471 (CVSS score: 7.2), has been present since logical decoding was introduced...

New Ted Backdoor Hides Inside Victims' Own HAProxy Builds to Intercept Web Traffic

Source: *The Hacker News*

A previously undocumented Linux toolkit has been found compiled directly into the trojanized HAProxy load balancers of two South Korean organizations, where it

intercepted web traffic and served altered pages to selected visitors. The attackers named the implant ted in debug strings left in the bina...

Over 440,000 Exploit Attempts Target Super Forms and Elementor Pro RCE Flaws

Source: *The Hacker News*

Threat actors are exploiting two critical security flaws in WordPress plugins Super Forms and Elementor Pro, according to findings from Wordfence. The vulnerabilities in question are - CVE-2026-14894 (CVSS score: 9.8) - A missing file type validation vulnerability in Super Forms - Drag & Drop Form B...
