[\$] Compiling the kernel with gccrs

Source: *LWN.net*

Pierre-Emmanuel Patry and Arthur Cohen gave a talk at RustConf 2026 on the status of the Rust frontend for GCC (gccrs), with a particular eye toward the goal of compiling the Linux kernel . Patry gave a follow-up talk for a more kernel-focused audience at Kangrejos the next week, which Cohen could n...

Security updates for Tuesday

Source: *LWN.net*

Security updates have been issued by AlmaLinux (apr-util, corosync, curl, freerdp, gstreamer1-plugins-base, libarchive, libtiff, libxml2, openexr, openssh, rsyslog, sudo, tomcat, unbound, webkit2gtk3, yggdrasil, and yggdrasil-worker-package-manager), Debian (chromium), Fedora (alsa-plugins, amarok,...

Installing Fedora 45 on Stratis storage

Source: *Fedora Magazine*

The Anaconda installer in Fedora 45 will introduce a new option for storage configuration: Stratis, a modern solution for local storage management. Stratis isn't a completely new technology, it uses existing tools and technologies like device mapper, LUKS, and XFS and integrates them into an easy to...

Evolving your automation (Pt. 2): Architectural decisions for upgrading to Red Hat Ansible Automation Platform 2.7

Source: *Red Hat Blog*

Red Hat Ansible Automation Platform 2.7 introduces many new enhancements designed to scale enterprise automation, improve platform engineering productivity, and bridge the gap with AI-driven operations. Key updates include high-level advancements in AI orchestration through the Model Context Protoco...

AutoRAG pipeline optimization in Red Hat OpenShift AI

Source: *Red Hat Blog*

If you're an AI or machine learning engineer, you've seen the classic demo: ingest a clean PDF into a prototype, build a vector database index using standard tutorial

code, and submit a simple question. The model returns a pristine answer, everyone nods, and the project gets greenlit. Then it meets e...

Why Big Tech Keeps Betting on Omarchy

Source: SavvyNik

Linux now has a NEW Agentic OS and it's receiving massive funding from corporations and big tech. We're exploring the latest round of funding and why these companies are seeking out Omarchy. My Linux Bundle is here: <https://savvynik.com> Think your Ready for Linux? Take my quiz: <https://readyforlin...>

F5 Patches Critical BIG-IP APM Zero-Day Exploited for Unauthenticated RCE on OAuth Servers

Source: The Hacker News

Attackers are exploiting a critical flaw in F5 BIG-IP Access Policy Manager (APM) that lets them run code on a BIG-IP system without logging in, F5 says. The flaw, CVE-2026-94127, affects only systems in which APM serves as an OAuth authorization server, issuing access tokens to applications. F5 dis...

Chinese Hackers Exploit Chrome-Windows Zero-Day Chain to Deploy CLEANGULP Malware

Source: The Hacker News

A Chinese threat actor codenamed UTA0565 has been observed exploiting the recently disclosed Google Chrome-Microsoft Windows exploit chain as zero-days through fake websites. The attacks, detected on September 3 and 4, 2026, involved the chaining of two vulnerabilities in Chrome (CVE-2026-85046, CVE...

Critical Next.js ImageResponse Flaw Can Lead to Server Code Execution via Crafted SVG Input

Source: The Hacker News

A new security vulnerability in Next.js could allow attackers to run code on a server via ImageResponse, the feature that generates Open Graph and other social preview images, Vercel said. The risk applies when an app puts values an attacker controls, such as text read from the request URL, into the...

ShinyHunters Claims FBI Breach, Says It Stole Data on Agents and Job Applicants

Source: The Hacker News

The cyber extortion group known as ShinyHunters on Tuesday claimed it had breached the U.S. Federal Bureau of Investigation and stolen data belonging to current and former employees at the agency. "We have compromised the FBI. We hold very sensitive data on almost ALL FBI Agents and individuals who...

Check Point Warns of Management Server Zero-Day Exploited in Targeted Attacks

Source: The Hacker News

Attackers exploited a previously unknown flaw in Check Point's Security Management Server in a handful of targeted attacks on July 23, the company said. The flaw, CVE-2026-93616, allows an attacker who can access the server's web service to run scripts on it without logging in. Check Point released...

WordPress Issues Patch for Critical Flaw That Can Enable Code Execution on Some Servers

Source: The Hacker News

WordPress has fixed a critical flaw in its core software that lets an attacker with no account make a site load a PHP file from outside its theme folders. On some servers, that can go further, allowing the attacker to run their own code. The fix shipped on September 22 in WordPress 7.1.2, with fixes...

Malicious npm Package Poses as Twilio Bug-Bounty Probe, Can Exfiltrate Credentials

Source: The Hacker News

Cybersecurity researchers have disclosed details of a malicious npm package named "tw-pkgprobe-7731" that masquerades as a security tool targeting developers integrating Twilio into their applications, while stealthily attempting to harvest sensitive data. The package, named "tw-pkgprobe-7731," was...

Microsoft Takes Down EvilTokens Device-Code Phishing Service Tied to 12,000 Inbox Compromises

Source: The Hacker News

Microsoft on Tuesday announced the takedown of the EvilTokens device code phishing service that it said used artificial intelligence (AI) "at every step of the attack chain." The action, carried out with authorization from the U.S. District Court for the Eastern District of Virginia, involved the ef...

Critical Bifrost AI Gateway Flaw Lets Attackers Run Commands Without Credentials

Source: The Hacker News

A critical vulnerability in Bifrost, an open-source AI gateway that routes requests to more than 20 LLM providers, allows an unauthenticated attacker to run arbitrary commands on the gateway server with a single HTTP request. The flaw, tracked as CVE-2026-90898 (CVSS score: 9.8), affects all version...

Researcher Drops BigDiskBuster Zero-Day PoC That Blocks Microsoft Defender Updates

Source: The Hacker News

A zero-day proof-of-concept tool that stops Microsoft Defender from installing platform and signature updates by filling all available disk space was published on GitHub on September 19. The tool, called BigDiskBuster, has no patch, no CVE, and no Microsoft advisory. Its author, Abdelhamid Naceri, i...

AI Agents Are Rewriting the Rules of Lateral Movement

Source: The Hacker News

Security teams have spent decades asking whether an identity has too much access. AI agents raise a harder question: how can we determine which paths an autonomous system can discover, given the access it already has? A person may try several ways to complete a task. A deterministic application foll...

New CVSS 10.0 VeloCloud Orchestrator Flaw Actively Exploited in Certificate-Based Setups

Source: The Hacker News

Attackers are exploiting a new flaw in on-premises VeloCloud Orchestrator (VCO), the server that manages the Edge devices in a VeloCloud SD-WAN, Arista said on September 22. The flaw, tracked as CVE-2026-93952, may allow a remote attacker with no login access to privilege internal functions and affe...

DORA Year Two: Can Your SOC Actually See the Attack?

Source: The Hacker News

When the Digital Operational Resilience Act (DORA) became enforceable across the European Union in January 2025, it triggered an administrative sprint. Financial entities spent the first year establishing risk governance, assessing third-party service providers, updating contract clauses, and docume...

New Linux Kernel Flaw Gives ARM64 KVM Guests Read-Write Access to Host Memory

Source: The Hacker News

A new flaw in the Linux kernel's KVM virtualization code for ARM64 processors can leave a freed piece of host memory exposed to a guest virtual machine on hosts

with nested virtualization enabled. The bug, tracked as CVE-2026-89775, allows a guest to read and write host kernel memory, and the resear...

SharePoint Flaw Initially Listed as Spoofing by Microsoft Enables Authenticated RCE

Source: The Hacker News

A SharePoint Server vulnerability that Microsoft initially classified as a spoofing flaw with a CVSS score of 6.5 actually enables authenticated remote code execution, according to full technical details published today by Viettel Cyber Security researcher Dinh Ho Anh Khoa. The flaw, CVE-2026-65660,...

Malicious npm Package indexed-btree Hid Its Loader in Runtime Code Before Removal

Source: The Hacker News

A malicious npm package named "indexed-btree" has been observed hiding its malicious behavior within application code rather than using lifecycle scripts, indicating that threat actors are likely shifting tactics in response to recent security controls. "Indexed-btree is a malicious npm package mimi...

Microsoft killed FoxPro in 2007. Anyway, here's FoxPro revived

Source: Hacker News (Top 20)

Visual FoxPro stopped at version 9 in 2007. A surprising amount of it is still running, in 32 bits, because rewriting a 20-year-old business app is how you lose the business. A customer wanted to keep milking their app for the foreseeable future, so here it is: the same language on a new runtime (Ru...
