[\$] LWN.net Weekly Edition for September 24, 2026

Source: *LWN.net*

Inside this week's LWN.net Weekly Edition: Front : Git 2.56; gccrs; NetBSD and compat_linux; io_uring; Desktop UX. Briefs : WordPress vulnerability; Radicle vulnerability; Systemtap 5.6; GNOME 51; Systemd v262; Quotes; ...
Announcements : Newsletters, conferences, security updates, patches, and more...

[\$] Ideas on modernizing the open-source desktop

Source: *LWN.net*

Scott Jenson has been working on user interfaces (UIs) and user experience (UX) for many years at Apple, Google, and other companies. Now, he's trying to convince open-source projects to experiment more and drive the desktop beyond the age-old " windows, icons, menus, pointer " (WIMP) model. At Akad...

Systemd v262 released

Source: *LWN.net*

Systemd v262 has been released. Some of the notable new features include the ability to build systemd as a single statically linked binary for small containers, support for the kernel core dump socket protocol introduced with Linux 6.17, addition of OpenSSL 4 support, and many other changes. See the...

Critical security vulnerabilities in the Radicle network protocol

Source: *LWN.net*

The Radicle peer-to-peer code-collaboration project has disclosed two critical vulnerabilities in the network protocol used by Radicle nodes. The first flaw is that the network protocol used by Radicle " does not give the confidentiality it was expected to give ", which allows anyone who can observe...

Critical WordPress RCE vulnerability announced

Source: *LWN.net*

A critical vulnerability has been discovered in WordPress 's `get_page_template()` function for page-template resolution that could allow remote-code execution

(RCE) by an unauthenticated attacker, in some limited circumstances. The project has provided an update for the most recent branch of WordPress...

Security updates for Wednesday

Source: LWN.net

Security updates have been issued by AlmaLinux (coreutils, postgresql18-postgis, and postgresql:16), Debian (memcached), Fedora (chromium, cyrus-imapd, dotnet10.0, dotnet8.0, dotnet9.0, freeipmi, kernel, libxmp, perl-Net-DNS, and postgresql16-anonymizer), Mageia (cpio, diffutils, perl-Dancer2, and r...

Bringing enterprise Linux to the robotics frontier: ROS2 adds Red Hat Enterprise Linux as a tier-1 supported platform

Source: Red Hat Blog

The convergence of enterprise IT and physical computing is accelerating. As artificial intelligence transitions from purely digital environments into autonomous systems, industrial automation, and smart edge devices, the software foundation behind these systems must be as resilient as the physical m...

Unify VMs and containers with Everpure Cloud on Azure Red Hat OpenShift

Source: Red Hat Blog

As organizations accelerate their cloud transformations, IT teams often find themselves trapped between 2 worlds—managing mission-critical legacy virtual machines (VMs) in isolated silos while simultaneously attempting to build cloud-native applications on modern platforms. This divide creates opera...

The playbook behind Red Hat's most successful OpenShift deployments

Source: Red Hat Blog

The cluster is up. The team celebrated. A year later, the same 5 applications you migrated at launch are still the only workloads running on it. Developers are confused about what's expected of them. Operations is buried in manual processes and don't have the bandwidth to handhold developers. Leader...

From incident insight to governed action with LogicMonitor Edwin AI and Red Hat Ansible Automation Platform

Source: Red Hat Blog

Despite substantial investments in observability tools and automation, IT operations teams still spend critical incident response minutes context-switching

across dashboards, copying data into chat channels, and evaluating whether a potential fix is safe to run in production. Integrating LogicMonitor...

Breaking the AI productivity paradox: an intelligent migration factory to modernize infrastructure and applications

Source: Red Hat Blog

The rise of generative AI promised a silver bullet, but for most enterprises, especially banks, digital transformation remains a slow, complex, and costly endeavor. Early reports suggested massive developer productivity gains. But when AI is applied to complex enterprise systems, organizations often...

OpenAI Agent Bypassed Australian Medicare Portal Controls to Access Non-Public Files

Source: The Hacker News

An AI agent on an internal OpenAI research task bypassed access controls on an Australian government Medicare statistics portal in June, Prime Minister Anthony Albanese said. The portal publishes aggregate figures, such as spending, and is separate from the systems that handle Medicare claims and pe...

TeamFiltration Campaign Compromises Seven Microsoft 365 Accounts Using Default Passwords

Source: The Hacker News

Cybersecurity researchers have disclosed details of an active TeamFiltration campaign codenamed UNK_CondorFiltration that has targeted over 5,700 accounts across 28 Microsoft 365 tenants. According to Proofpoint, the activity has primarily focused on Chilean retail and financial institutions. It ori...

Attackers Exploit WordPress CVE-2026-87902 Within Hours of Disclosure

Source: The Hacker News

Threat actors have begun to actively exploit a critical security flaw in WordPress within hours of public disclosure. The vulnerability in question is CVE-2026-87902 (CVSS score: 9.2), which could allow an unauthenticated attacker to obtain remote code execution (RCE). "An unauthenticated attacker c...

Attackers Use Malicious Terraform Providers to Deliver Go Malware via HashiCorp Registry

Source: The Hacker News

Cybersecurity researchers have disclosed Go-based malware distributed via two Go Modules and two Terraform providers, marking the first time threat actors are using the centralized repository hosted by HashiCorp as a distribution vector for malicious payloads. According to Aikido, the list of Terraf...

A Leaked GitLab Issue Email Address Lets Anyone Push Code and Run CI Jobs as You

Source: The Hacker News

The private email address GitLab gives you for filing issues by email is a credential. Anyone who gets it can email a patch that GitLab commits in your name, to any branch you can push to, including main, and can start CI/CD jobs that run as you. GitLab shows each user this address behind a button I...

MikroTrick Chain Let Attackers Take Over MikroTik Routers Without a Password or SSH Key

Source: The Hacker News

Two MikroTik RouterOS SSH vulnerabilities chained together let attackers take full administrative control of Internet-exposed routers without a password, SSH key, or completed authentication. The chain, which CERT Polska calls MikroTrick, combines an SSH state-machine flaw (CVE-2026-67279) with an a...

This Windows Malware is Built to Let Up to Four AI Models Vote on Its Next Move

Source: The Hacker News

A Windows malware called CLOSEDQUORUM is built to take orders from a vote of up to four AI models instead of an attacker's server, Cisco Talos said on September 22. The models can choose to steal Windows credentials, saved browser passwords, and crypto wallet data. Talos has not seen this setup work...

Compromised MemTensor Packages Deliver sckit Credential Stealer via npm and PyPI

Source: The Hacker News

Unknown threat actors have managed to compromise two legitimate MemTensor packages across the npm and Python Package Index (PyPI) repositories to push a platform-specific Go-based implant dubbed sckit designed for Windows, Linux, and macOS. According to reports from Aikido, SafeDep, Socket, and Step...

New cPanel Flaw Lets a Hosting Account Run Code as Root, Take Full Server Control

Source: The Hacker News

A flaw in cPanel's CalDAV and CardDAV service lets anyone with a cPanel hosting account run code as root and take "full control of the server," the company said on September 22. A second bug in the WP Toolkit plugin, used to install and manage WordPress sites, allows an account holder to change data...

545 Hackers Tested It First. Now XRanges for AI Scores Your Security Agent

Source: The Hacker News

Autonomous security agents are getting good at finding bugs. Nobody has a good way to measure how good. Point one at a realistic target and what comes back is a report the agent wrote about itself: confident prose, a list of findings, and no way to tell which of them happened. Someone with a securit...

Anthropic and OpenAI Models Still Attempt Restricted Actions in Safety Tests

Source: The Hacker News

Anthropic and OpenAI on Tuesday announced new models, with both artificial intelligence (AI) companies noting that they are continuing to invest in improving alignment to combat risky behavior. Opus 5.5, per Anthropic, is a "major step up from Opus 5," and "achieves the best scores of any model to d...

Exploit Released for Unpatched Ubuntu Linux Flaw Enabling Host-Root Container Escape

Source: The Hacker News

A use-after-free in the Linux kernel's AF_UNIX socket subsystem can be used to escape a container and gain root on the host, security firm DepthFirst said in research published September 22. The flaw, tracked as CVE-2026-80521 (CVSS score: 7.8), was fixed upstream on August 6, but Ubuntu has not shi...
