[$] LWN.net Weekly Edition for November 12, 2026

Source: LWN.net

> Inside this week's LWN.net Weekly Edition: Front : Synaptics patent claims; Git LLM polilcy; Hibernation and lockdown; User namespaces; glibc tunables. Briefs : *sshole; Amutable foundations; Asahi Linux 7.3; OpenIndiana 2026.10; Firefox 160; Quotes; ... Announcements : Newsletters, conferences, sec...

Zellij 0.46 released

Source: LWN.net

> Version 0.46 of the Zellij terminal workspace has been released. This release includes a major addition in Zellij: Zellij is now also a desktop terminal. To run it: zellij terminal . It works on linux, mac and windows. Nothing changes for the normal multiplexer - Zellij can still run inside another...

In Memoriam: Tim Peters 1952–2026

Source: LWN.net

> Guido van Rossum conveys the sad (and somewhat delayed) news of the passing of Tim Peters. It's hard to overestimate Tim's influence on Python. He's probably best known for writing the Zen of Python (PEP 20), but to me he was a mentor and language co-designer long before that. Tim found Python not...

[$] Additional hardening for the glibc dynamic linker

Source: LWN.net

> The Node.js project recently had a security vulnerability that affected its Brotli decoder. The bug was a buffer overflow , but the particular way that official Node.js binaries are built for Linux meant that one of the main protections against turning a buffer overflow into remote code execution, a...

Security updates for Wednesday

Source: LWN.net

> Security updates have been issued by AlmaLinux (edk2), Debian (openexr, rsyslog, and srt), Fedora (alertmanager, dotnet11.0, gdal, mstflint, nextcloud, python-

> crate-ingredients, rust-ingredients, rust-pore, rust-pulldown-cmark, rust-rbw, rust-sequoia-sq, rust-siguldry-fedora-autopen, tigervnc, unbou...

Guide to observability with Red Hat OpenShift 5

Source: Red Hat Blog

> In Red Hat OpenShift 5, observability, powered by Red Hat OpenShift Lightspeed, transforms cluster management through 3 core capabilities designed to accelerate incident response while maintaining enterprise-grade safety and human control.Autonomous troubleshootingAfter you configure the Alertmanage...

Unlocking next-generation workloads: What’s new in Red Hat OpenShift Virtualization 5

Source: Red Hat Blog

> As organizations navigate rising hypervisor licensing costs, ongoing hardware scarcity and procurement delays, and the race to support AI workloads, IT teams face a difficult balancing act. Red Hat OpenShift Virtualization meets this challenge by giving enterprises a single platform to migrate legac...

Red Hat Advanced Cluster Management for Kubernetes 5.0: Run your Kubernetes fleet with more control

Source: Red Hat Blog

> A growing Kubernetes fleet brings more than compute. It also creates more places to search, policies to maintain, and upgrade paths to watch.That work adds up fast. Red Hat's 2026 fleet management research found that 85% of organizations grew their fleets during the prior year. Yet only 17% reported...

Now in Developer Preview: The self-managed Red Hat Enterprise Linux command-line assistant

Source: Red Hat Blog

> The self-managed Red Hat Enterprise Linux (RHEL) command-line assistant is now available as a Developer Preview. Building on the offline RHEL command-line assistant Developer Preview, this release shifts control to you: Deploy on your own infrastructure, and choose an LLM inference provider that ali...

Latin America leads investments in digital sovereignty, but is it ready to execute?

Source: Red Hat Blog

> Digital sovereignty was once treated as a regulatory debate or an aspiration for the far future, but it has quickly evolved into a strategic and operational

> imperative for organizations worldwide. A new global study, conducted by Futurum Research and sponsored by Red Hat, reveals that digital sovere...

Introducing Red Hat Enterprise Linux 10.3 and 9.9

Source: Red Hat Blog

> Today, we are proud to announce the availability of Red Hat Enterprise Linux (RHEL) 10.3 and RHEL 9.9. Today’s launch is about reinforcing the platform’s foundation to meet the evolving security, operational, and AI-driven demands of the modern enterprise.RHEL 10.3 and 9.9 deliver on this necessity...

How Red Hat OpenShift 5 simplifies incident diagnosis with supervised AI

Source: Red Hat Blog

> Prometheus metrics, traces, and logs are rarely missing in modern enterprise environments. Most platform teams already have plenty of telemetry at their disposal. The real bottleneck is the sheer volume of data a human must parse before taking meaningful action during an incident.On a busy cluster,...

Announcing the general availability of MCP server for Red Hat Enterprise Linux

Source: Red Hat Blog

> System administrators and developers have long relied on a mix of specialized tools, deep knowledge, and hard-earned intuition to keep Red Hat Enterprise Linux (RHEL) environments running smoothly. But as hybrid cloud footprints grow and infrastructure becomes more complex, finding the root cause of...

Malware found disguised as 3rd party Plasma Extension: Neonova wallpaper

Source: David Edmundson's Blog

> It has been brought to the attention of the KDE security team that NeoNova Animated Wallpaper (https://github.com/abbygraceton1992/NeoNova-KDE-Wallpaper) is shipping malware. This report came from Serg Star who spotted it reviewing this code. It's great that we have people spotting this stuff, thoug...

When Home Security Gets Hijacked

Google Cloud Warns Three AMD Turin CPU Flaws Could Leak Data Across Processes in VMs

Source: The Hacker News

> Google Cloud VMs on AMD Turin chips need a guest OS patch and a stop-and-start to protect against three CPU side-channel flaws, Google said this week. The company has already applied mitigations against attacks between VMs, and between VMs and the host. Inside a VM, the flaws may let an attacker wit...

Webinar: See How Identity Blind Spots Put Your SOC at Risk and How to Close Them

Source: The Hacker News

> Security teams have more alerts, logs, and monitoring tools than ever. Yet when an attack happens, one simple question can still take too long to answer: Who or what is behind this activity, and what can they access? A suspicious login might belong to an employee. An unusual API call could come from...

New N-central Exploits Work Against Patched Servers, Enable Root RCE and Windows SYSTEM Access

Source: The Hacker News

> N-able on Thursday said it's investigating a new public disclosure containing claims of additional vulnerabilities in on-premise versions of N-central running version 2026.4.1 HF2. "Based on our initial review, the server issue described depends on a non-default configuration in which the Legacy API...

Calendar Invites and Live Proxies: Inside a Google Session Hijacking Campaign

Source: The Hacker News

> Since mid-August 2026, a phishing operation has been stealing live Google sessions from corporate users. Every check defenders normally lean on to judge a link came back clean, and the operator designed it that way on purpose. The Threat Research team at Material Security spotted the campaign and ha...

PTC Patches Critical Windchill and FlexPLM Flaw That Could Enable Remote Code Execution

Source: The Hacker News

> PTC has released patches for a new critical vulnerability impacting Windchill and FlexPLM software that, if successfully exploited, could result in remote code execution. The security flaw, tracked as CVE-2026-126325, carries a CVSS v4 score of 9.2 out of a maximum of 10.0. It has been described as...

Critical Pre-Auth MongoDB Flaw (CVE-2026-118383) Can Crash Lagging Servers on Failover

Source: The Hacker News

> A critical flaw in MongoDB Server allows an unauthenticated attacker to send two requests that trigger a crash on the database server. The crash occurs only if that server is later chosen to take over as the main server while it still lacks some recent changes. MongoDB, the company that makes the da...

Node.js Fixes 16 Flaws, Including HTTP/2 Bugs That Crash Servers and Leak Other Connections' Data

Source: The Hacker News

> A flaw fixed in Node.js this week lets unauthenticated clients crash servers that use the runtime's built-in HTTP/2 support on the 24.x and 26.x release lines. A second HTTP/2 flaw can cause a server to send a client pieces of its memory, including responses intended for other connections. Fixed ver...

Attacker Used 4,837 Hijacked GitHub Accounts to Run a CI Secret Stealer in 1,806+ Repositories

Source: The Hacker News

> Starting Tuesday, an attacker used stolen credentials for 4,837 GitHub accounts to plant a secret stealer in repositories those accounts could write to, according to Aikido Security, a security software company. The stealer is built to take the secrets and cloud credentials that a repository's CI wo...

Critical Apache HTTP/2 Flaw Could Let Unauthenticated Attackers Execute Code Remotely

Source: The Hacker News

> A critical flaw in Apache HTTP Server's HTTP/2 module, mod_http2, can let a remote attacker run code on the server. Tracked as CVE-2026-119618, it affects versions 2.4.55 through 2.4.70 and is fixed in version 2.4.71, released yesterday. Only servers with HTTP/2 enabled are affected, according to Re...

ScreenConnect Attacks Target at Least 288 Endpoints Across 48 Organizations With Rogue Clients

Source: The Hacker News

> ConnectWise has taken the precautionary step of disabling five third-party extensions in partner environments following reports of unauthorized access. In an advisory posted on its site, the company said there is no evidence that the incident involves a compromise of its infrastructure or a vulnerab...

Critical Zoom Workplace Flaw Could Allow Unauthenticated Remote Privilege Escalation

Source: The Hacker News

> Zoom has released software updates to address two security flaws impacting Zoom Workplace for Windows, including a critical bug that could result in privilege escalation on affected systems. The vulnerabilities are listed below - CVE-2026-108186 (CVSS score: 9.6) - An improper input validation vulne...

AntiFox AI Pentesting Platform Linked to Attacks That Accessed AWS Production Secrets

Source: The Hacker News

> Cybersecurity researchers have disclosed details of a campaign in which an emerging agentic penetration testing platform called AntiFox has been used to steal Amazon Web Services (AWS) credentials and pivot laterally into compromised environments. "In several recently observed intrusions, Alibaba Cl...

Hackers Target Qlik Sense Servers With Reverse Shells, Stage ActiveMQ and Veeam Exploits

Source: The Hacker News

> Threat actors have been observed targeting Qlik Sense servers to unsuccessfully deliver PowerShell reverse shell commands against multiple environments in October 2026. Cynet's CyOps and Research teams said they identified the suspicious activity in October 2026 against several E.U.-based customers...

Over 35,000 Grok-Built Apps Exposed Online, Some Leaking Confidential Data and Passwords

Source: The Hacker News

> Of the 37,571 Grok-built apps that security company Claroc found online, 35,578 were open to anyone without a sign-in, the researchers said yesterday. They included 24 apps built by staff at the social network X and at SpaceXSI, the company that makes the Grok AI assistant. Most of the open apps wer...
