[\$] An update on Rust's project goals

Source: *LWN.net*

Tomáš Šedovič is a program manager at the Rust Foundation. He co-leads the goals team , which helps organize the Rust project's overall goals , including making sure that the people who have agreed to work on one have the support they need. At Kangrejos 2026, he provided an overview of the Rust proj...

[\$] The [vx]swap showdown

Source: *LWN.net*

The kernel's swap layer has undergone some significant changes over the course of the last year and a number of longstanding problems have been addressed. One problem that has not yet been solved in the mainline is the direct tie between slots in the swap cache and space in persistent swap files, wh...

Security updates for Thursday

Source: *LWN.net*

Security updates have been issued by AlmaLinux (bind, firefox, freerdp, ghostscript, glibc, kernel, kernel-rt, perl-DBI, python3.12, rust-rpm-sequoia, rust-sequoia-sq, rust-sequoia-sqv, and vim), Debian (gst-plugins-base1.0, python3.11, and xz-utils), Fedora (7zip, chromium, curl, docker-buildx, ker...

Source: *Red Hat Blog*

IBM and Red Hat Remediate More Than 400 Previously Unknown Open Source VulnerabilitiesLightwell has identified and remediated more than 400 previously unknown vulnerabilities in widely used Java libraries, addressing a growing business risk as autonomous AI agents become capable of combining several...

Using on-premise Red Hat Lightspeed capabilities to monitor vulnerabilities and apply advisor remediations

Source: *Red Hat Blog*

Managing vulnerabilities across a fleet of Red Hat Enterprise Linux (RHEL) systems is a continuous challenge. Between tracking Common Vulnerabilities and

Exposures (CVEs), prioritizing by business risk, planning RHEL upgrades, and remediating issues, operations teams juggle multiple tools and workfl...

MLOps at the edge: Running AI models at the edge

Source: Red Hat Blog

In Part 1: Preparing AI models for deployment, we saw how our model left the training pipeline as a signed, optimized Open Container Initiative (OCI) artifact ready to travel to the edge. Now, our next question is: what will be the implications of running those AI workloads at the edge? Running AI i...

Actionable disconnected cluster analysis, available now with pen drive powered by Red Hat Lightspeed

Source: Red Hat Blog

Red Hat OpenShift doesn't stop at the cloud boundary. Telecommunications providers, government agencies, and financial institutions run OpenShift in environments that are intentionally air-gapped — and keeping those clusters healthy has always been the hard part. Pen drive is here to fix that. Disco...

They Used AI to Rebuild Photoshop & More... Then Open-Sourced It

Source: SavvyNik

An open source project just opened up the Adobe suite to the public. ArtCraft decided to open source a clean room build of the Adobe Suite.. on a GitHub repo and it's available to all. This is what happens when AI starts reverse engineering into Open Source. Will this keep happening and what do we d...

The AI Velocity Paradox: Why Security Is Decades Behind AI Ambition

Source: The Hacker News

As enterprises race to deploy autonomous AI agents to accelerate business, a new report reveals they are tethered to security architectures built for a different era.

The "Horizons of Identity Security" report from SailPoint highlights a critical "velocity paradox," in which organizations invest in...

GoBalance Flaw Lets Attackers Hijack .onion Addresses by Recovering Tor-Format Keys

Source: The Hacker News

A bug in GoBalance, a tool many dark-web sites use to stay reachable during attacks, lets anyone work out the secret key that controls a site's .onion address using only public information, and then take that address over. Searchlight Cyber, which disclosed the flaw on October 8, says an attacker wh...

Three Teams Demonstrate Remote Hacks of Fully Patched Google Pixel 10 at Pwn2Own

Source: The Hacker News

Three research teams broke into Google's Pixel 10 on October 8 at Pwn2Own Ireland, a hacking contest in Cork whose rules require every target to be fully patched. The contest pays researchers to show working exploits and passes the flaws to the vendors. One of the three Pixel exploits earned Ikotas...

Citrix Patches Critical NetScaler Flaw That Could Enable RCE in SAML Deployments

Source: The Hacker News

Citrix has released patches for yet another critical security flaw impacting NetScaler ADC and NetScaler Gateway that could result in remote code execution or denial-of-service (DoS) under certain conditions. "CVE-2026-107406 is a memory overflow vulnerability that may lead to remote code execution...

FBI Seizes 7 Domains, Disrupts Flax Typhoon Tools Used in Critical Infrastructure Intrusions

Source: The Hacker News

The U.S. Federal Bureau of Investigation (FBI) and Department of Justice (DoJ) have announced the disruption of malicious tools used by a China-linked advanced persistent threat group known as Flax Typhoon. To that end, the agencies seized several domains and blocked access to platforms that were us...

FBI Says China-Linked Hackers Ran Portal Giving Third Parties Access to Stolen Emails

Source: The Hacker News

Hackers tied to a Chinese cybersecurity company stole email from government organizations, law enforcement agencies, healthcare systems, and religious

institutions in Southeast Asia, the FBI and agencies in 6 other countries said on October 8. The company, Integrity Technology Group, has been sancti...

ThreatsDay: Ransomware Affiliate Betrayal, WhatsApp RAT, Exposed Hacker Tools and 12 More Stories

Source: The Hacker News

The crooks have trust problems of their own. One ransomware affiliate decided to keep the profits for himself. Elsewhere, an attacker left a server exposed, complete with tools and traces of an intrusion. Apparently, keeping things secure is a problem on both sides of the fence. The rest of the week...

Japan Sees Sharp Rise in Web Data Leaks Amid Mobile API Abuse and Metabase Attacks

Source: The Hacker News

Attackers behind a string of personal data leaks at Japanese organizations have abused APIs for mobile apps and targeted known software flaws, the JPCERT Coordination Center (JPCERT/CC) said. The Tokyo-based center, which takes incident reports, based its October 8, 2026 alert on those reports and o...

UAC-0099 Targets Ukrainian Government Personnel With ASHVEIN RAT Hiding Commands in HTML

Source: The Hacker News

The Russia-aligned threat actor known as UAC-0099 has been attributed to a previously undocumented .NET infostealer and remote access trojan (RAT) codenamed ASHVEIN. According to TrendAI, the malware has been put to use in attacks targeting Ukrainian government personnel. The cybersecurity company i...

ARTEX AI Pentesting Tool Used in Data Theft Attacks on South Korean Financial Firms

Source: The Hacker News

Cybersecurity researchers have disclosed details of a targeted campaign aimed at South Korean financial organizations that used an artificial intelligence (AI) pen testing tool named ARTEX to carry out the attacks. The activity, per CrowdStrike Intelligence, was active from late September to early O...
