[$] LWN.net Weekly Edition for October 22, 2026

Source: LWN.net

> Inside this week's LWN.net Weekly Edition: Front : Android vendor hooks; Reproducible builds and kernel integrity; Rust data structures; NFS server changes; Setting no_new_privs for PID 1; Rust XArray; Rust cross-crate declarations; 7.3 statistics; Nix flakes. Briefs : eMudhra CA compromise; PHP RCE...

Today's PHP Security Release, and How We're Strengthening PHP Security (PHP Foundation)

Source: LWN.net

> The PHP Foundation has put out a blog entry explaining how the vulnerabilities disclosed today came about and why they took so long to fix. To fix the OOM problem, the PHP security team developed several competing approaches, but each came with its own trade-offs: backward compatibility breaks, new...

More vulnerabilities in widely deployed software

Source: LWN.net

> The Node.js project has released a number of security updates to fix, among other vulnerabilities, a remote-code-execution bug affecting programs that use Brotli compression. And, in case any programmers who use compiled languages thought they could relax, the musl libc project has also announced a...

[$] Hash-based module integrity for reproducible distributions

Source: LWN.net

> We last looked in on hash-based integrity checking for kernel modules just over a year and half ago. Since that time, the patch set has undergone multiple revisions. At the 2026 Linux Plumbers Conference (LPC), Thomas Weißschuh described the need for kernel-module integrity guarantees while still pr...

Upstreaming Tyr: Rust, DRM, and the Linux Kernel (Collabora)

Source: LWN.net

> The Collabora blog provides an update on Tyr , a driver for Arm Mali GPUs. One of our biggest challenges has been developing Tyr while the Rust kernel abstractions

> and driver interfaces are also being developed. As the driver interfaces are naturally revised and improved, we have rewritten Tyr sever...

[$] Understanding Nix flakes

Source: LWN.net

> Nix flakes are an experimental feature of the Nix package-management tool designed to build projects in a more self-contained and reproducible way. Despite the feature's experimental status, it has become increasingly popular for open-source projects to publish flake.nix files that offer predefined...

PHP patches released for two critical RCEs

Source: LWN.net

> The PHP project has published PHP versions 8.5.12 , 8.4.27 , 8.3.36 and 8.2.35 to address two critical vulnerabilities that could allow unauthenticated remote code execution. Who is at risk: all PHP installations serving web requests, including PHP-FPM, Apache with mod_php, php-cgi, FrankenPHP and L...

Four stable kernels for Wednesday

Source: LWN.net

> Greg Kroah-Hartman has announced the release of the 7.2.12 , 6.18.58 , 6.12.114 , and 6.6.160 stable kernels. Each contains a number of important fixes; users are advised to upgrade.

Security updates for Wednesday

Source: LWN.net

> Security updates have been issued by AlmaLinux (bubblewrap, emacs, gimp:2.8, glibc, jackson-databind, kernel, kernel-rt, librabbitmq, openexr, openssh, postgresql:16, postgresql:18, python3, resteasy, wireshark, xorg-x11-server, and xorg-x11-server-Xwayland), Debian (ca-certificates, firefox-esr, gi...

Securing AI agents in the enterprise AI factory: NVIDIA BlueField and DOCA Argus on Red Hat OpenShift

Source: Red Hat Blog

> The agent problem at scaleAutonomous agents are powerful because they act. But when instructions are ambiguous, when tools don't behave as expected, or when a complex task takes an unexpected turn, the agent makes judgment calls. You can't expect an agent to fully police its own behavior.This is exa...

RHEL for NVIDIA delivers trusted foundation for next-gen AI workloads

Source: Red Hat Blog

> New NVIDIA GPUs typically arrive before a standard enterprise Linux release can carry every driver, kernel change, and virtualization patch those systems need. The usual result is a bad choice: wait, or stand the first cluster up on an operating system the team does not intend to keep.Red Hat Enterp...

Red Hat OpenShift Virtualization achieves NVIDIA-Certified Hypervisor status

Source: Red Hat Blog

> Red Hat OpenShift Virtualization 4.22 has achieved NVIDIA-Certified Hypervisor status for NVIDIA HGX systems, validating near bare-metal GPU performance for representative AI and accelerated computing workloads.What this means for customersYou no longer have to choose between the flexibility of VMs...

Red Hat and HP: Empowering physical AI from bench to fleet

Source: Red Hat Blog

> Teaching a robot to perform its first task is thrilling, but turning that initial win into a repeatable, self-improving process capable of backing production fleets is a challenge. Communities like the one behind Robot Operating System 2 (ROS2) have made the record-train-deploy loop more accessible...

The Dark Webs Most Popular Forum Got Hacked

Source: Mental Outlaw

> In this video I explain how a zero day vulnerability in Dread's anti DDoS software, along with it's head technical admin accidentally uploading a private key, lead to the sites main onion domain getting hijacked, and the site being taken offline temporarily. I also discuss the hackers attempt to lau...

This Is What Happens When AI Floods Open Source

Source: SavvyNik

> An open source research study just took place from the Linux Foundation and opens up what AI & LLMs are doing to projects like Linux and open source. It's not all great.. We learn a lot of stats about the state of AI & LLMs in the dev and programming. Will this keep happening and what do we do? My L...

Linux News: Rust Takes Over Linux, 7.4 Speedups, Steam Frame, KDE & More

Source: SavvyNik

> Big week for Linux as Rust continues to become a more widely used language in Linux and open source projects.. we also get a new 3D desktop with GNOME updates, KDE's Future updates, Big Wins when it comes to performance boosts.. and much much more.. Let's cover this weeks news in Linux and Open Sour...

LiteLLM Suspects GitHub Token Leak in AI Gateway Logs Behind Malicious Package Release

Source: The Hacker News

> LiteLLM on Wednesday disclosed that threat actors compromised "multiple independent security controls" to push a malicious version of the Python package containing a credential stealer and a backdoor. On October 21, 2026, LiteLLM's release pipeline was compromised to push 1.107.0 to the Docker Hub r...

Node.js Brotli Decoder Bug Could Allow Remote Code Execution in All Supported Versions

Source: The Hacker News

> Node.js released security updates on October 21 for its three supported release lines, 22.x, 24.x and 26.x, fixing 10 flaws. The most serious is a bug in the Brotli decompression code that Node.js bundles, which the project says can allow remote code execution, meaning an attacker could run code of...

New QPACK Flaws Can Crash HTTP/3 Servers, Trigger Up to 4,000-Fold Memory Amplification

Source: The Hacker News

> A remote attacker who has not logged in can crash many HTTP/3 web servers with a single connection, security firm FoxIO disclosed, releasing working proof-of-concept code. By sending a small batch of compressed HTTP headers that expands in memory to a much larger set, the attacker can force the serv...

Someone Tried to Exploit PHP2Shell 4 Days Before the Vulnerabilities Were Publicly Disclosed

Source: The Hacker News

> Amazon's Threat Intelligence team on Wednesday said it detected an attempt to exploit the newly disclosed PHP2Shell vulnerabilities on October 17, 2026, against its MadPot honeypot service, as the flaws come under broad exploitation in the wild following the release of the patches. "The exploit atte...

China-Linked Hackers Use ARTEX AI Agents in ConnectWise Supply Chain Attack

Source: The Hacker News

> Microsoft on Wednesday disclosed that a China state-aligned actor dubbed Storm-0940 was behind the recent supply chain compromise of the ConnectWise Cloud Backup application. During the incident, Storm-0940 used ARTEX, a Go-based agentic AI penetration testing framework that was made closed-source i...

Critical GitLab Flaw (CVSS 10.0) Could Allow Unauthenticated RCE Across 12 Years of Releases

Source: The Hacker News

> GitLab released fixes on October 21 for a flaw that lets an attacker run code on a self-managed server without logging in, and it affects every version of the software going back to 7.0, released in 2014. The fix matters even for administrators who patched nine days earlier: the October 12 update co...

LiteLLM Compromised in Supply Chain Attack Delivering Credential Stealer and Backdoor

Source: The Hacker News

> The popular LiteLLM Python package has been compromised as part of a software supply chain attack that delivered a credential stealer and a backdoor, according to reports from SafeDep, Socket, StepSecurity, and Upwind. The compromise affects LiteLLM 1.107.0, distributed through PyPI wheels and Docke...

OpenAI's GPT-6 Agent Removed Safety Monitoring, Then Falsely Denied Doing So

Source: The Hacker News

> OpenAI has revealed that two artificial intelligence (AI) agents powered by GPT-6.1 Sol and GPT-6 Astra weakened misalignment monitoring while making requested software changes during two internal coding tasks. The AI company said the incident took place on October 3 and 6, 2026, for Sol and Astra,...

PHP Issues Emergency Patches for Two Critical PHP2Shell RCE Flaws as Exploit Attempts Emerge

Source: The Hacker News

> PHP has released emergency updates that fix two critical flaws in the language itself, letting an attacker without an account run code on a web server. The fixes are in PHP 8.5.12, 8.4.27, 8.3.36 and 8.2.35, and the PHP team says only updating fully protects a server. The flaws, together called PHP2...

Google Chrome Adds ClickFix Warnings to Stop Users From Running Malicious Commands

Source: The Hacker News

> Google on Tuesday said it's rolling out improved safeguards in its Chrome browser to secure users against ClickFix attacks when Enhanced Protection is enabled. ClickFix is a popular social engineering technique in which bad actors trick users into copying and pasting malicious code directly into the...

China-Aligned Bronze Sandcastle Abuses Sandboxie DLL Sideloading to Deploy Backdoors

Source: The Hacker News

> Cybersecurity researchers have disclosed details of a previously undocumented China-aligned threat cluster known as Bronze Sandcastle that has been observed targeting organizations in Asia and Africa since mid-2025. "The most distinctive technical marker for Bronze Sandcastle is its consistent use o...

Generative AI Is Erasing Behavioral Tells, Weakening Behavior-Only Detection, Proofpoint Reports

Source: The Hacker News

> Generative AI has changed what a malicious email looks like. Messages that once gave themselves away through clumsy wording, generic pretexts, and reused templates now arrive fluent, personalized, and unique to each recipient, and the behavioral signals email filters have relied on for years are fad...

PHP2Shell: What Actually Protects You Before the 14:00 UTC PHP RCE Patch, and What Doesn't

Source: The Hacker News

> You cannot fully block the two critical PHP flaws called PHP2Shell before today's fix, and the one setting being passed around as a workaround is not enough on its own, the security firm that suggested it now says. PHP will release the fix at 14:00 UTC on October 21 for two flaws it rates 9.2 out of...

The Harness Is the Hard Part of Agentic Pentesting

Source: The Hacker News

> An AppSec team can point an AI agent running on a general-purpose model at its own web apps with little setup. Sure, the model writes the attacks. But everything that makes those attacks safe to run against production and worth acting on afterward lives in the harness around the model. The harness i...

Attackers Hijacked Over 300 Tor Exit Relays to Intercept SSH Connections

Source: The Hacker News

> Attackers took control of more than 300 Tor exit relays in early October and used them to redirect SSH connections to servers that stole login passwords, a researcher found. Exit relays are the last hop in a Tor circuit, where traffic leaves the network for its destination. Only a password login to...
