[\$] LWN.net Weekly Edition for September 3, 2026

Source: LWN.net

Inside this week's LWN.net Weekly Edition: Front : Python JIT; null block driver; steal time; GNOME governance; 7.3 merge window; LUKS. Briefs : Kernel infrastructure; Debian AI; Dolphin 26.08; Firefox 155; Incus 7.4; OpenShot 4.0; Quotes; ... Announcements : Newsletters, conferences, security upda...

[\$] Securely suspending LUKS-encrypted disks

Source: LWN.net

When a laptop is asleep, its memory is not unreadable. The right tooling can attach to the computer's memory bus and read out its contents, and cold-boot attacks can theoretically read values from memory for a short time after the computer loses power. That is really an unavoidable fact about the ha...

[\$] Governing GNOMEs: how the project's technical decision-making is evolving

Source: LWN.net

Emmanuele Bassi kicked off a project to improve GNOME's technical governance with a presentation about his ideas (video) at GUADEC 2025 . His nudging has led the project to, slowly, work on creating more formal structures for technical governance. It is adopting a teams structure and looking toward...

Incus 7.4 released

Source: LWN.net

Version 7.4 of the Incus container and virtual-machine management system has been released. Notable changes in this release include UEFI Secure Boot key management, "near-live" migration of containers between Incus instances, as well as burst I/O limits for disk and network devices.

Eight stable kernels for Wednesday

Source: LWN.net

Greg Kroah-Hartman has announced the 7.2.3 , 7.1.13 , 6.18.49 , 6.12.108 , 6.6.156 , 6.1.187 , 5.15.220 , and 5.10.269 stable kernels. Each contains a number

of important fixes throughout the tree. Users are advised to upgrade. Note that 7.1.13 is the last of the 7.1 updates

Security updates for Wednesday

Source: LWN.net

Security updates have been issued by AlmaLinux (dbus-broker, freerdp, gegl, gegl04, gimp, gimp:2.8, glib2, grafana, gzip, iperf3, libssh, nodejs22, nodejs24, nodejs:22, nodejs:24, php:7.4, php:8.2, pipewire, ruby:3.3, ruby:4.0, tar, wget, and xmlrpc-c), Debian (cyrus-imapd, keystone, and lemonldap-n...

What risk-aware model deployment looks like in regulated industries

Source: Red Hat Blog

Regulators don't ask banks whether their portfolios look healthy. They require documented proof of how they hold up under adversarial conditions—rate shocks, liquidity crunches, market crashes. The same logic applies to AI models headed for production. Before they carry your name, you need to know h...

Red Hat Satellite 6.20 limited availability: Early access registration now open

Source: Red Hat Blog

In November 2026, Red Hat will release a limited availability (LA) version of Red Hat Satellite 6.20 – the next generation of Red Hat's premiere platform for managing Red Hat Enterprise Linux (RHEL) at scale. This release focuses on 2 foundational changes that matter for teams modernizing their mana...

Linus Torvalds: "We're Going in the Wrong Direction"

Source: SavvyNik

Linus Torvalds Speaks on workflow and how AI affects the Linux kernel development and open source. We also hear from other projects and how they're being overwhelmed by AI reports and patches. There's a lot of changes happening to the Linux Kernel because of recent dev and tools like AI/LLMs. We'll...

Metal3 meets KubeVirtBMC: Provisioning KubeVirt VMs like bare metal

Source: CNCF Blog

In the previous post , we introduced KubeVirtBMC and showed how it provides virtual BMC endpoints for KubeVirt VMs. We tested it with raw IPMI and Redfish commands. That was fun, but the real power of...

Kubernetes v1.37: Scale Workloads to Zero with HorizontalPodAutoscaler

Source: Kubernetes Blog

Kubernetes v1.37 includes API support for horizontal autoscaling of workloads down to zero replicas. This feature is now Beta and enabled by default. A HorizontalPodAutoscaler (HPA) that uses a suitable object metric or external metric can now scale a workload to zero replicas, then bring it back wh...

Decoding the new AI lingo: Loops, harnesses, squads, hill climbing... oh my!

Source: GitHub Blog

From loop engineering to harnesses, squads, and open weights, the GitHub Podcast breaks down the AI terms showing up in developer conversations. The post Decoding the new AI lingo: Loops, harnesses, squads, hill climbing... oh my! appeared first on The GitHub Blog .

How we make AI coding more cost efficient without sacrificing task quality

Source: GitHub Blog

Why shorter outputs can cost more, and how GitHub Copilot reduces wasted work across the complete coding task. The post How we make AI coding more cost efficient without sacrificing task quality appeared first on The GitHub Blog .

Multiverse says its 438B model is fast enough for AI agents. The benchmarks tell a more complicated story.

Source: The New Stack

A 438-billion-parameter reasoning model isn't an obvious choice when speed is a priority. Multiverse Computing is betting that compression can. The post Multiverse says its 438B model is fast enough for AI agents. The benchmarks tell a more complicated story. appeared first on The New Stack .

Your next OpenAI API timeout might not be a timeout at all

Source: The New Stack

Researcher Releases FalconFlank PoC Showing Privilege Escalation in CrowdStrike Falcon

Source: The Hacker News

The security researcher known as Chaotic Eclipse (aka INFINITE NIGHTMARE, MSNightmare, and Nightmare-Eclipse) has dropped a new zero-day dubbed FalconFlank, a privilege escalation flaw impacting CrowdStrike Falcon. "FalconFlank is a 0day privilege escalation that abuses the office malicious macros r...

CISA Adds Seven Exploited Flaws as Attackers Deploy Reverse Shells and Crypto Miners

Source: The Hacker News

The U.S. Cybersecurity and Infrastructure Security Agency (CISA) on Wednesday added seven security flaws to its Known Exploited Vulnerabilities (KEV) catalog after they landed in attackers' crosshairs. The vulnerabilities are as follows - CVE-2026-83548 (CVSS score: 10.0) - A server-side request for...

Google, Anthropic, and OpenAI Unveil Cyber AI Models, Safeguards, and Access Programs

Source: The Hacker News

Google on Wednesday announced Gemini 3.8 Flash Cyber, which it described as its most capable cybersecurity model, and has made it available to a set of trusted defenders via a new initiative called the Fairwind Program. "The Fairwind Program gives high-priority defenders (like governments, healthcar...

Fake Software Installers Disable Windows Update and Weaken Microsoft Defender

Source: The Hacker News

An active malware campaign is using bogus software-download websites to impersonate trusted vendors and distribute malicious installers. "The campaign has targeted users looking to download popular software and has resulted in compromises across multiple organizations and industries, primarily affec...

Malicious .git Configs Can Make Claude, Codex, Cursor, and Other AI Agents Run Attacker Code

Source: The Hacker News

Manifold Security has disclosed eight security flaws across seven command-line AI coding agents in which a repository's own Git configuration names a command that the agent runs on the developer's machine, four of them still unpatched at publication. The command executes as the user, outside the age...

Malicious Apache Modules Hijack Brazilian Government Site Traffic to Push Betting Pages

Source: The Hacker News

A Chinese-speaking cybercrime cluster known as Gambling Goblin has been observed installing malicious Apache modules on compromised web servers run by Brazilian government and educational institutions, and using them to divert visitors to attacker-controlled pages promoting online gambling and sport...

BGP Hijack Delivers Malicious Virtualizor Update That Establishes Persistent Root Access

Source: The Hacker News

Virtualizor said hackers used a Border Gateway Protocol (BGP) hijack to divert Softaculous traffic. The hackers then used the diverted update traffic to deliver a malicious Virtualizor package to some installations. A hosting-provider account separately said 5 of its 34 checked Virtualizor hyperviso...

Meta Ads Push StreamRat Android Trojan That Can Gain Near-Complete Device Control

Source: The Hacker News

Cybersecurity researchers have disclosed details of a new Android banking trojan called StreamRat that was promoted to Spanish-speaking users through a fake television-streaming campaign on Meta and can give operators near-complete control of infected devices. ThreatFabric said the campaign's advert...

How to Secure Enterprise AI: From Adoption to Incident Readiness

Source: The Hacker News

The debate about whether AI delivers business value is over. The challenge now is implementing it at scale and securely across every function while meeting board-level pressure to move fast. Organizations must focus on adopting AI at business speed without losing control of cyber risk. Download the...

Attackers Exploit Two SonicWall SMA 1000 Zero-Days That May Form an Attack Chain

Source: The Hacker News

SonicWall has released security updates to address two security flaws impacting its Secure Mobile Access (SMA) 1000 series VPN appliances that have been exploited in zero-day attacks. The vulnerabilities, discovered internally by SonicWall's William Perry and Adam Babis, are listed below - CVE-2026-...

GeoNetwork Fixes Unauthenticated RCE Chain Affecting Government Geoportal Backends

Source: The Hacker News

Two vulnerabilities in GeoNetwork can be chained to achieve unauthenticated remote code execution (RCE) on the open-source geospatial metadata catalog, which sits behind many government and agency geoportals. The project shipped fixes in versions 4.4.12 and 4.2.17 on July 8, 2026, and published the...

Extradited Russian Hacker Faces Charges Over Excel Malware Campaign That Infected Thousands

Source: The Hacker News

The U.S. Department of Justice (DoJ) has charged a Russian national, extradited from Cyprus on August 28, with using roughly 255 fake accounts on a freelance platform to send malware-laced Excel attachments to about 80,000 of its users in 2016 and 2017. Searzhudin Tamirlanovich Aktulaev, 40, was arr...
