Igalia celebrates "Twenty-Five Years Upstream"

Source: *LWN.net*

The open-source consulting firm Igalia has put out an announcement celebrating 25 years of working on upstream FOSS projects for its clients. The list of projects the company has worked on is rather eye-opening: WebKit, mobile-browser rendering (on Maemo, Moblin, MeeGo, and Tizen), the Linux kernel...

Three new stable kernels

Source: *LWN.net*

Greg Kroah-Hartman has released the 7.2.7 , 6.18.53 , and 6.12.111 stable kernels. As is usual these days, they are quite large; also no surprise is that they provide many important fixes throughout the kernel tree. Users of those kernels are advised to update.

[\$] Testing compat_linux on NetBSD with the Linux Test Project

Source: *LWN.net*

NetBSD has long had support for running Linux binaries via its kernel-level compat_linux feature, but test coverage for it was less complete than some might hope. In order to provide better testing for compat_linux , Google Summer of Code (GSoC) participant Henrique Brito opted to work on enabling t...

Security updates for Monday

Source: *LWN.net*

Security updates have been issued by AlmaLinux (kernel, perl-Net-DNS, sudo, tomcat, and tomcat9), Debian (chromium, gimp, libde265, libevent, linux-6.12, ruby-jwt, and unbound), Fedora (asterisk, chromium, doctl, dovecot, evolution, firefox, forgejo, freeciv, freeipa, gegl04, gimp, libheif, nss, opk...

Turning security complexity into useful intelligence: What's new in Red Hat Lightspeed

Source: *Red Hat Blog*

In a post-Mythos world, IT teams face a mounting crisis. Many are doing more with the same staff, and security work hasn't gotten simpler. Alerts still land without

context. Compliance still means chasing down answers across tools. A single incident can consume an afternoon before anyone knows the r...

2026 update: The road to quantum-safe cryptography in Red Hat OpenShift

Source: Red Hat Blog

A year ago, I wrote about the road to quantum-safe cryptography in Red Hat OpenShift. At the time, much of that road was forward-looking: TLS 1.3 was not yet the default, Go did not support post-quantum algorithms, and the first NIST post-quantum cryptography (PQC) standards had only just been final...

SideCopy Broadens India Targeting to Academia With ReverseRAT Spear-Phishing

Source: The Hacker News

The threat actor known as SideCopy has been observed using spear-phishing lures to target academic institutions in India, expanding their strategic focus beyond government entities. "SideCopy campaign operations typically initiate through spear-phishing campaigns that leverage the abuse of mshta.exe...

One Hidden Meta Muse Setting Could Let Attackers Turn the AI Assistant Into a Backdoor

Source: The Hacker News

Malware already running on a Mac can quietly take over Meta's Muse assistant and use the broad access its owner granted the app, security researcher Patrick Wardle has shown in a proof-of-concept released on September 21. It works by changing a hidden setting so that when the user taps the microphone...

WordPress Comment2Shell Flaw Can Turn Anonymous Comment XSS Into RCE via Admin Session

Source: The Hacker News

A new flaw in WordPress core let an anonymous visitor leave a comment that planted a hidden script on the page. If a logged-in administrator later opened that page, the script could run code on the site's server. WordPress fixed the flaw, tracked as CVE-2026-93485 and dubbed "Comment2Shell," on Sept...

Zyxel and Veeam Flaws Under Active Exploitation With Command and SYSTEM Access

Source: The Hacker News

The U.S. Cybersecurity and Infrastructure Security Agency (CISA) on Monday added a now-patched security flaw impacting Zyxel GS1900 series switches to its Known Exploited Vulnerabilities (KEV) catalog, citing evidence of active exploitation. The vulnerability, tracked as CVE-2026-7273 (CVSS score: 8...

Fake LastPass Authenticator Installer Abuses Microsoft-Signed Driver to Kill Antivirus and EDR

Source: The Hacker News

A fake LastPass Authenticator installer offered on GitHub installs a Windows kernel driver that shuts off antivirus and other security software before a password stealer runs if a victim downloads and runs it, researchers at LastPass and Delphos Labs said on September 17. Microsoft's own hardware-co...

Contagious Interview Campaign Compromises 30,000 Devices, Steals \$10.71M in Crypto

Source: The Hacker News

The North Korean threat actors behind the Contagious Interview campaign have compromised at least 30,000 devices located in more than 100 countries and siphoned funds or account credentials from over 7,000 cryptocurrency wallets, according to a new joint cybersecurity advisory. The primary targets o...

Google Fined €403 Million Over GDPR Violations Tied to Location Data

Source: The Hacker News

Google has been fined €403 million for breaking the EU's data protection law, the GDPR, in the way three of its features handled people's location data from May 2018 to February 2020. Ireland's Data Protection Commission (DPC), Google's lead regulator in the EU, also ordered the company to make its...

Weekly Recap: Cisco 0-Day, AI Agent RCE, ClickFix Attacks, ClickFix Surge, and Browser Hijacks

Source: The Hacker News

A browser. A plugin. A package. A login screen. Normal stuff. That is basically the problem this week. The trouble keeps showing up inside things people already trust: code that takes a bad turn, old payloads coming back, exposed systems, weak checks, fake fixes, and attack paths that look almost to...

TASK#STOMP PowerShell Backdoor Steals Documents, Wi-Fi Passwords, and Clipboard Data

Source: *The Hacker News*

Cybersecurity researchers have disclosed details of a new campaign dubbed TASK#STOMP that delivers a PowerShell backdoor designed to harvest sensitive data from compromised hosts. The backdoor "automatically harvests and exfiltrates business documents, watches the filesystem for new files in real ti...
