Linux

[$] Containers as a recognized kernel object

Source: LWN.net

> The foundation of the design for containers in the kernel is that there isn't one; there is no container abstraction that the kernel recognizes. Instead, the kernel provides a long list of components — namespaces, control groups, sandboxing mechanisms, and more — along with a note that says, in effe...

Security updates for Thursday

Source: LWN.net

> Security updates have been issued by AlmaLinux (cjose, emacs, expat, gcc-toolset-15-gcc, java-17-openjdk, java-25-openjdk, kernel, kernel-rt, libX11, libXi, libXrender, libXtst, mod_auth_openidc:2.3, pki-deps:10.6, thunderbird, webkit2gtk3, and yggdrasil), Debian (chromium, firefox-esr, and openjdk-...

Friday Five — October 30, 2026 | Red Hat

Source: Red Hat Blog

> Fierce Network - Telcos can cash in on AI, not just pay for it: Red HatRed Hat's Joe Fernandes discusses how open models can help telcos move from renting AI capacity to owning it and selling inference and agent services. Rising token costs and sovereignty needs are pushing operators like ATT, T-Mob...

Sovereignty debt: How APAC boards accumulate it and what it costs to repay

Source: Red Hat Blog

> Sovereignty debt is emerging as a critical board-level liability across the Asia Pacific (APAC) region. The concept of technology debt is not new. It has challenged organizations through successive technology cycles, from data analytics to public cloud adoption and now generative AI.The definition i...

Why ITOps needs a governed automation foundation for AI

Source: Red Hat Blog

> Lately I hear many customers saying the same thing in different words—they added an AI layer to their environment, expected everything to get better, but

> haven't really noticed anything different yet.In practice, the addition I see first usually sits upstream, whether that's a copilot, an AIOps corr...

Massive Linux Kernel Networking Flaw Found

Source: SavvyNik

> Another round of NEW Linux vulnerabilities that got released on the Linux Kernel Mailing List.. this time it's in networking.. What has people worried is some distros have not patched this yet. A bug has been hiding in the Linux kernel where an attacker can gain access using a TCP Networking Linux K...

Official Claude Code VS Code Extension Compromised to Install Persistent SSH Backdoor

Source: The Hacker News

> Cybersecurity researchers have disclosed that the official Anthropic Claude Code extension was compromised on the Open VSX registry to install a persistent SSH backdoor on infected hosts. The issue has since been traced to the compromise of the Cursor Marketplace, prompting the AI coding platform Cu...

Hackers Actively Exploit Highly Critical Drupal Commerce Core Authorization Bypass Flaw

Source: The Hacker News

> Drupal has warned that threat actors are exploiting a "highly critical" security flaw in its Commerce Core component. The vulnerability, tracked as CVE-2026-118539 (CVSS score: N/A), is a case of missing authorization affecting Commerce Core versions from 0.0.0 to 2.41 and from 3.0.0 to 3.3.13. "Thi...

CISA Adds Actively Exploited GitLab RCE and Cisco Firewall DoS Flaws to KEV

Source: The Hacker News

> The U.S. Cybersecurity and Infrastructure Security Agency (CISA) on Thursday added two security flaws impacting Cisco and GitLab software to its Known Exploited Vulnerabilities (KEV), citing evidence of active exploitation. The vulnerabilities are listed below - CVE-2026-97229 (CVSS score: 10.0) - A...

Binance Suffers Security Breach Affecting $6.3 Billion in Assets, Nearly $3 Billion Frozen

Source: The Hacker News

> Cryptocurrency giant Binance said on Thursday that a "security incident" on its platform has impacted about $6.3 billion worth of assets. The world's biggest cryptocurrency exchange said nearly $3 billion of those assets have been frozen on-chain so far. Tether and Circle said they have frozen more...

ThreatsDay: Critical Firewall Flaws, Banking Trojans Rented, Weaponized PDF, Token Theft + 26 More Stories

Source: The Hacker News

> Some attacks take real skill. Others just need someone to leave a door open. This week has both. Exposed passwords, old bugs still getting exploited, and trusted software doing things it shouldn't. There's a strange mix of clever tricks and careless mistakes. Hackers are borrowing trust from familia...

Linux Kernel TCP Flaw With 9.8 CVSS Score Affects Ubuntu, Red Hat and Other Distributions

Source: The Hacker News

> A flaw in the Linux kernel's TCP code, tracked as CVE-2026-98432, affects Ubuntu, Red Hat Enterprise Linux (RHEL), and other Linux distributions. The kernel's own CVE team rates it 9.8 out of 10 on the CVSS scale. Anthropic said on October 27 that its AI model wrote an exploit that uses the flaw to...

Fake ChatGPT and Claude Apps Abuse Signed Executables to Deploy Crypto Miners

Source: The Hacker News

> Threat actors are delivering malicious loaders and cryptocurrency miners under the guise of artificial intelligence (AI) desktop applications for Anthropic Claude and OpenAI ChatGPT as part of a campaign dubbed Yoba. The activity involves creating fake GitHub projects that claim to be desktop applic...

Google's Gemini 4 Carbon Leads Benchmarks for Finding, Exploiting, and Patching Vulnerabilities

Source: The Hacker News

> Google on Wednesday took the wraps off Gemini 4 Carbon, its latest frontier model with state-of-the-art cybersecurity and long-horizon capabilities. "It shows significant gains across coding and agentic tasks as well as across key capabilities critical for cybersecurity defense, landing a firm lead...

Webinar: How to Build AI Threat Readiness Into Your Security Operations

Source: The Hacker News

> Security teams have spent years trying to detect threats faster. AI is changing the harder part: how much time defenders have left to act. Advanced AI models can now help attackers discover vulnerabilities, generate exploit code, and move through weaknesses faster than traditional security processes...

Telegram Android Flaw Lets Attackers Run Code When Users Answer Voice Calls

Source: The Hacker News

> A flaw in Telegram for Android could be chained with two other bugs to take full control of a victim's phone through a voice call, once the victim answered, according to security startup NebuSec. The attacker needed only an ordinary Telegram account. Telegram fixed the flaw in version 12.10.4 of the...

The Rise of the Threat Operator: How AI Will Redefine Security Operations and Careers

Source: The Hacker News

> AI is beginning to take over much of the work that has traditionally defined the security analyst's job. Investigating alerts, collecting evidence, correlating activity across tools, and executing response actions are becoming tasks that AI systems can perform on their own. As these capabilities mat...

26,400 Valid Cloud and AI Credentials Found Exposed in Public Gitee Repositories

Source: The Hacker News

> 26,400 credentials that developers left in public code on Gitee, a Chinese code-hosting service, still worked when a researcher tested them. Anyone who copied one from that code could have used it. Independent researcher Ben Zimmermann found them by scanning 7.25 million public Gitee repositories an...
