[$] The first part of the 7.4 merge window

Source: LWN.net

> Since the merge window for 7.4 opened, there have been 6,753 non-merge changesets pulled into the mainline repository. Many more are expected, especially given the possibility that this merge window will be extended to three weeks. Still, even this initial set brought in a number of new features, in...

[$] Seeking smaller kernel stacks

Source: LWN.net

> Memory has always been a scarce resource in computing systems, but the problem seems to have worsened recently. In particular, the worldwide shortage of memory chips has led to a renewed focus by systems developers on reducing memory usage. During the memory-management microconference at the 2026 Li...

Security updates for Friday

Source: LWN.net

> Security updates have been issued by AlmaLinux (buildah, expat, grafana, grafana-pcp, httpd, iperf3, openssh, php, php8.4, php:7.4, php:8.2, and php:8.3), Debian (aide, chromium, clamav, erlang, linux-6.12, roundcube, unbound, and webkit2gtk), Fedora (bind9-next, ca-certificates, clevis-pin-trustee,...

Installing Fedora 45 on Stratis storage

Source: Fedora Magazine

> The Anaconda installer in Fedora 45 will introduce a new option for storage configuration: Stratis, a modern solution for local storage management. Stratis isn’t a completely new technology, it uses existing tools and technologies like device mapper, LUKS, and XFS and integrates them into an easy to...

How organizations can get more value from open source

Source: Red Hat Blog

> An organization might first encounter open source when it adopts an open source library, operating system, database, or application. But robust open source

> engagement goes much further than just using software. Organizations need to understand how to participate in the communities behind the softwar...

Top 5 enterprise use cases for AI agents

Source: Red Hat Blog

> We've spent the last 2 years watching AI agents trudge from exciting experiments into actual business operations. The KPMG Q1 2026 AI Pulse Report confirms it: 54% of organizations are now deploying agents across core systems.Most of us have first-hand experiences with chatbots and what these langua...

This Company Used The Worst Private Keys Ever

Source: Mental Outlaw

> In this video I discuss the 8 eMudhra certificate authority private keys that used less than 8 bits of entropy and could have allowed hackers to hijack the web traffic of thousands of websites. My merch is available at https://based.win/ Subscribe to me on Odysee.com https://odysee.com/@AlphaNerd:8...

Massive Linux Zero-Days Just Went Public (Before the Fixes)

Source: SavvyNik

> Another round of NEW Linux vulnerabilities that got released on the Linux Kernel Mailing List.. on accident? What has people worried is there's currently no official fix. A bug has been hiding in the Linux kernel where an attacker can gain access using a Linux Kernel Exploit. My Linux Bundle is here...

CISA Flags Two Actively Exploited Critical Flaws in Collabora Online and Arista VeloCloud

Source: The Hacker News

> The U.S. Cybersecurity and Infrastructure Security Agency (CISA) on Friday added two vulnerabilities impacting Collabora Online Built-in CODE Server and Arista

> VeloCloud Orchestrator (VCO) to its Known Exploited Vulnerabilities (KEV), citing reports of active exploitation in the wild. The critical-s...

BlackX UEFI Bootkit Bypasses Secure Boot on Patched Windows Systems Missing Revocations

Source: The Hacker News

> Diplomatic organizations in Central Asia have been targeted by a sophisticated new Unified Extensible Firmware Interface (UEFI) bootkit called BlackX. The activity, which singled out diplomatic entities in Tajikistan, Uzbekistan, and Turkmenistan in early 2026, is suspected to be orchestrated by a C...

Ruby Fixes Three Regex Engine Bugs Responsible for Four Critical GitLab RCE Flaws

Source: The Hacker News

> Ruby has released versions 4.0.9, 3.4.12, and 3.3.13 to fix three bugs in Onigmo, the regular expression engine built into the language. The bugs lie behind four critical security flaws that GitLab patched over the past month. GitLab found that a specially crafted pattern could corrupt memory while...

Exposed Infrastructure Reveals How Ransomware Affiliates Used AI Agents to Execute Intrusions

Source: The Hacker News

> Cybersecurity researchers have discovered an artificial intelligence (AI)-driven intrusion ecosystem run by affiliates of the INC and The Gentlemen ransomware groups. Central to the operation is an "Autonomous Red Team Kill Chain Framework" referred to as Phantom. The threat actor is assessed to be...

Hackers Breach Enterprise Firewalls and VPNs, Exposing Over 70,000 Credentials

Source: The Hacker News

> Cybersecurity researchers have disclosed details of a large-scale campaign that has targeted exposed network edge devices such as Fortinet FortiGate and Palo Alto Networks GlobalProtect firewalls. "Artifacts from this investigation also indicate that operators in this campaign have obtained access t...

PHP Warns of Another Unpatched RCE Risk Two Days After Emergency PHP2Shell Patches

Source: The Hacker News

> PHP has warned of another way an attacker could run code on a web server, two days after it shipped emergency fixes for the critical PHP2Shell flaws. The new

> issue, assigned CVE-2026-115560, affects only web applications configured in an unusual way, and PHP considers it an unlikely risk.The project...

Russia-Linked Hackers Used New Mesh Network Backdoor in Destructive Ukraine Attack

Source: The Hacker News

> The Russian state-sponsored hacking group Sandworm teamed up with another threat actor to carry out a destructive wiping attack targeting a Ukrainian logistics company last year. According to ESET, the attack involved UAC-0099 (aka Earth Sirrush) obtaining initial access to the target on July 16, 20...

Critical Flaw in Python’s Popular Pillow Image Library Allows Code Execution via a Crafted Image

Source: The Hacker News

> Pillow, the most widely used image library for Python, can be made to run operating system commands on a server by specifying the name of a file it is told to open. The flaw, CVE-2026-112900, is in the way Pillow handles EPS images, which it opens by passing the file's name to Ghostscript, a separat...
