[$] User namespaces + file capabilities = trouble

Source: LWN.net

> User namespaces are a key part of the kernel's toolkit for assembling containers; processes within a user namespace can appear to have full root access to the system while gaining no extra privileges in the wider system. At least, that is the intent. In practice, keeping privilege contained within a...

Security updates for Thursday

Source: LWN.net

> Security updates have been issued by AlmaLinux (dpdk, httpd:2.4, kernel, kernel-rt, mysql:8.0, php:7.4, php:8.0, qt5, ruby:2.7, ruby:3.0, tesseract, webkit2gtk3, and xorg-x11-server-Xwayland), Debian (imagemagick, puppet-agent, symfony, trapperkeeper-authorization-clojure, and xen), Fedora (3proxy,...

Source: Red Hat Blog

> Smart Talks with IBM: The $5 Billion effort to help secure the world’s shared softwareProject Lightwell commits $5 billion and aims for 20,000 engineers to help secure open source software. Malcolm Gladwell talks with Red Hat's Gunnar Hellekson among cybersecurity leaders about AI-driven vulnerabili...

Bridging the open source remediation gap: Introducing two new lessons on Lightwell

Source: Red Hat Blog

> Modern enterprise development runs on open source. With this reliance, securing the open source software supply chain has reached a critical inflection point, especially as AI-assisted vulnerability discovery accelerates the speed and volume of CVE disclosures. Enterprise teams now face an urgent ch...

5-minute demo: How to build modern applications with Red Hat OpenShift

Source: Red Hat Blog

> Building and deploying enterprise applications is no longer just about launching containers—it’s about managing the entire software lifecycle with a focus on security, intelligence, speed, and predictability. As a result, modern development teams must meet a dual imperative: Deliver new features on...

3 recent enhancements to Red Hat Hybrid Cloud Console

Source: Red Hat Blog

> The product and engineering teams behind Red Hat Hybrid Cloud Console are always working on ways to improve the user experience. Recently, we delivered a simplified and more customizable presentation that works the way our users do, and this article covers 3 features that exemplify that focus: The h...

OpenAI Found 948 Ways to Hack Linux..

Source: SavvyNik

> Another round of NEW Linux vulnerabilities from OpenAI just got released on the Linux Kernel.. this time it's from AI.. What has people worried is some distros have not patched this yet. 948 new ways for privilege escalation. My Linux Bundle is here: https://savvynik.com Think your Ready for Linux...

The Flood is Coming And The Pipes Were Already Full

Source: The Hacker News

> An update on Athena, and some unsolicited predictions on what's coming next On Saturday, Dario Amodei published We Must Pace the Frontier. I agree with him. Go read it if you haven't. I've spent the summer looking at what these models find, and the gap he describes between what they can do and what...

Chainalysis Breach Exposes All Users' Credentials, Forces Shutdown of Key Services

Source: The Hacker News

> Blockchain analysis firm Chainalysis has revealed that its ongoing investigation into the agentic cyber attack targeting its systems also exposed names, usernames, password hashes and live tokens for all users. "While we investigated, we removed access to Reactor and Data Solutions," the company sai...

Hackers Hide Linux Backdoor in Control Web Panel Server to Execute Commands Without Logs

Source: The Hacker News

> A backdoor has been found hiding in the web server that runs Control Web Panel (CWP), a free panel for managing Linux hosting servers, researchers at QiAnXin's XLab said this week. The backdoored web server executes commands that attackers send via web requests, and those requests never appear in it...

Experts Demonstrate Barracuda Email Security Gateway Chain Enabling Root Access Without Login

Source: The Hacker News

> Two flaws in Barracuda's Email Security Gateway, an email-filtering appliance, can be chained to run commands on it as root, its highest level of access, with no login required. The company released patches on Monday, and the security firm watchTowr detailed the attack chain on Thursday. One flaw, C...

OpenSSH Issues Emergency Fix for Flaw Letting Long Passwords Bypass SSH Auth on Alpine Linux

Source: The Hacker News

> Attackers can log in to accounts that have no password, such as SSH key-only accounts, on some Alpine Linux servers running the standard openssh-server package. They need network access to the server, an account name, and a password between 257 and 1,024 bytes long. OpenSSH, which rates the flaw cri...

Researchers Bypass ChatGPT Lockdown Mode to Exfiltrate Chats Without User Interaction

Source: The Hacker News

> Cybersecurity researchers have disclosed details of a now-patched vulnerability that could be exploited to bypass Lockdown Mode protections in OpenAI ChatGPT. Lockdown Mode was introduced by the artificial intelligence (AI) company in June 2026 as an optional setting to minimize data exfiltration ri...

ThreatsDay: Apache OFBiz RCE, DreamHost Breach, DeFi Site Hijacks + 17 More Stories

Source: The Hacker News

> How much damage can someone do without breaking much? Quite a lot, it seems. A stolen login can open doors across several systems. A trusted setting can be used to lock people out. Even a simple file copy can reach places it shouldn't. And while new tools are helping find security holes faster, some...

Is Your Exposure Management Platform Leaving You Exposed? Five Tests to Find Out

Source: The Hacker News

> A critical finding can move through several security tools and still leave the organization exposed. The vulnerability has a severity score, and a ticket has reached the queue. Progress then depends on information the finding may lack: who owns the system, whether attackers can reach it, what protec...
