EuroPython 2026 videos published

Source: *LWN.net*

All of the videos from the EuroPython 2026 conference, held in Kraków, Poland from July 13 through July 19, are now online along with a recap of the event from conference organizers.

[\$] Accelerating the kernel's build process

Source: *LWN.net*

Kernel developers do a lot of kernel builds. Since the kernel is not a small program, those builds can take a fair amount of time, even on a fast machine. The kernel also has a complex build system; it is probably fair to say that few developers truly understand it, and fewer still are willing to tr...

Two stable kernel updates for Friday

Source: *LWN.net*

Greg Kroah-Hartman has announced the release of the 7.2.5 and 6.18.51 stable kernels. There are more than 550 patches in each with fixes throughout the tree; users are advised to upgrade.

Security updates for Friday

Source: *LWN.net*

Security updates have been issued by AlmaLinux (apr-util and qt6-qt5compat), Debian (libevent and ruby-rack), Fedora (bluez, corosync, curl, dokuwiki, grpcurl, libevent, and rest), Oracle (gstreamer1-plugins-bad-free, perl-DBI, python-urllib3, qt5-qtbase, qt6-qt5compat, and thunderbird), Red Hat (os...

Closing the AIOps loop with Splunk Observability Cloud and Red Hat Ansible Automation Platform

Source: *Red Hat Blog*

Detection is only half the process. Swift remediation is what keeps operations smooth. Yet for many site reliability engineers (SREs), on-call shifts are spent trapped in a loop of repetitive firefighting. Pairing Splunk Observability Cloud with Red Hat Ansible Automation Platform helps bridge the g...

blog | 5 reasons why your Lightwell strategy needs more than just patches

Source: Red Hat Blog

Lightwell empowers organizations to respond to vulnerabilities with greater speed. However, receiving a patch is only part of the equation; your teams require validated skills to deploy those fixes into production quickly, safely, and with confidence. When a new vulnerability surfaces, obtaining a se...

GitLab CVSS 10 File-Read Flaw Draws In-the-Wild Probes After Disclosure

Source: The Hacker News

GitLab has released patches to address multiple flaws, including a maximum-severity security vulnerability that has witnessed in-the-wild probes within hours of public disclosure. The vulnerability in question is CVE-2026-85706 (CVSS score: 10.0), a path traversal issue in the repository commits API...

Anthropic Says Seven China-Based AI Labs Ran Industrial-Scale Claude Distillation Attacks

Source: The Hacker News

Anthropic on Thursday said it identified and disrupted industrial-scale illicit distillation attacks against Claude from seven labs based in China, including Alibaba, Moonshot, DeepSeek, Z.ai (aka Zhipu), and MiniMax. Knowledge distillation by itself is a legitimate training method. It refers to a m...

Claude Used to Automate Exploitation and Data Theft Across Multiple Victims

Source: The Hacker News

Anthropic has warned that cybercriminals and state-sponsored hackers alike are using its Claude models for cyber attacks, weapons design, propaganda, and mass surveillance between December 2025 and August 2026. The threat actors, which the artificial intelligence (AI) company has branded Generative...

Russian State-Sponsored Hackers Use Claude to Rebuild Malware After Detection

Source: The Hacker News

Anthropic on Thursday revealed it disrupted a campaign mounted by a Russian state-sponsored threat actor that abused Claude for developing an AI-assisted workflow to get ahead of the detection curve. The operation has been attributed to a cyber espionage group it calls GTG-20006 (where "GTG" stands...

Your Critical Vulnerabilities Might Not Be Your Biggest Risk

Source: The Hacker News

Security teams have become exceptionally talented at finding vulnerabilities. Now, it's time to turn our attention to optimizing the process for determining which of those vulnerabilities actually create a path to compromise. A critical vulnerability may look alarming on a scanner report, but if it...
