Source: Fedora Magazine

> We are happy to announce the general availability of Fedora Asahi Remix 45. This release brings Fedora Linux 45 to Apple Silicon Macs. What’s included Fedora Asahi Remix is developed in close collaboration with the Fedora Asahi SIG and the Asahi Linux project. This release incorporates all of the ex...

Trustworthy AI starts with community governance

Source: Red Hat Blog

> Developers are using AI to write code, generate tests, and ship features faster than ever. The tools are becoming more capable, and the amount of work they can perform is expanding quickly. As code generation accelerates, open source communities face an entirely new bottleneck: review.Open source de...

Moving Lightwell patches into production by orchestrating the release lifecycle

Source: Red Hat Blog

> In this article:Vulnerability remediation requires more than just merging code: While opening a pull request (PR) updates a dependency, that's not the end of the process. Safely moving that change to production requires integration testing, change management, controlled traffic draining, and patch v...

Future-proofing enterprise AI: The impact of post-quantum cryptography on Red Hat AI Enterprise

Source: Red Hat Blog

> We are rapidly approaching an intersection of 2 generational technology shifts: The explosive adoption of generative artificial intelligence (AI), and the looming reality of cryptographically relevant quantum computers (CRQCs). While AI is transforming how we extract value from data, quantum computi...

Announcing Fedora 45

Source: Red Hat Blog

Critical Rails Flaw Lets Attackers Write Server Files via Crafted ImageMagick Uploads

Source: The Hacker News

> A critical flaw in Ruby on Rails could allow an unauthenticated attacker to write arbitrary files on an app's server by uploading a crafted file if the app processes uploads using ImageMagick. The Rails project disclosed the flaw in an advisory and fixed it in versions 8.1.4.1 and 8.0.5.2. The flaw...

Xen Hypervisor Flaws Let One Malicious VM Read and Write Any Other VM's Memory

Source: The Hacker News

> Two flaws in the Xen hypervisor allow a malicious guest virtual machine (VM) to read and write the memory of other VMs on the same host, including dom0. Dom0 is the VM that, by default, has full permissions and manages the others. Patches are out, and there is no known mitigation, the Xen Project sa...

Radio With No Radar: Why Agent Runtime Security Fails Without the Layers Beneath It

Source: The Hacker News

> Nearly every agent security pitch now ends on the same promise: the product stops the bad action in real time. The promise holds for one kind of agent, the kind whose traffic passes through a gateway the enterprise owns. Most agents never touch one. One recent case shows what that gap looks like in...

China-Aligned Hackers Hijack Sogou Input Method DNS Requests to Deploy DarkVigil Backdoor

Source: The Hacker News

> A China-aligned threat actor known as SlippyNunchucks has been attributed to a Domain Name System (DNS) hijacking operation abusing insecure HTTP communications in Windows versions of Sogou Input Method as part of a surveillance campaign designed to deploy an implant called DarkVigil (aka FDMTP). Th...

Russian Police Arrest 3 Suspected VasyGrek Hackers, Dismantle Criminal Infrastructure

Source: The Hacker News

> Russian authorities have arrested three suspected members of a threat group known as VasyGrek and dismantled its criminal infrastructure. Also known as Fluffy Wolf, the threat actor has a history of targeting Russian and international companies since 2016. The Ministry of Internal Affairs of the Rus...

Google Issues Patches for Critical Android Flaw That Could Allow RCE Without User Interaction

Source: The Hacker News

> A critical Android flaw could allow an attacker to run code on a phone without any user action remotely, Google said in its November security bulletin. The flaw, CVE-2026-58868, affects Android 14 through 17. Phones get the fix with security patch level 2026-11-01 or later, which phone makers and ca...

CISA Confirms Hackers Exploiting WordPress Core Flaw During Software Upgrades

Source: The Hacker News

> The U.S. Cybersecurity and Infrastructure Security Agency (CISA) has added a security flaw in WordPress Core to the Known Exploited Vulnerabilities (KEV) catalog, citing evidence of active exploitation. The high-severity vulnerability, tracked as CVE-2026-119977 (CVSS score: 8.1), is a case of Time-...

mSecure Warns Users to Change Passwords, Reset 2FA and Passkeys After Suspicious Activity

Source: The Hacker News

> Customers of the mSecure password manager are being urged to act now to protect the confidential information they store in it, possibly by changing passwords, resetting two-factor authentication (2FA), and removing passkeys. The warning came in an email sent on November 3 in the name of developer mS...

Chainstack Reports Production Systems Breach Exposing Customer Data and Password Hashes

Source: The Hacker News

> Blockchain infrastructure provider Chainstack on Tuesday disclosed that it was targeted in a cyber attack that allowed an unauthorized party to gain access to some parts of its infrastructure. The incident is assessed to be part of a large-scale, artificial intelligence (AI)-powered attack campaign...

Binance Reveals How Fake Job Interviews and AI Tool Abuse Led to $6.43 Billion Theft

Source: The Hacker News

> Binance on Tuesday said the record-setting theft of $6.43 billion in assets from the world's largest cryptocurrency exchange was the culmination of a "sophisticated, multi-stage campaign" that involved the use of a tampered Homebrew installation and recruitment-themed social engineering attack targe...

Barracuda Flaws Could Be Chained to Bypass Authorization and Gain Root Access

Source: The Hacker News

> Barracuda has disclosed details of two vulnerabilities affecting its products that, if chained together, could allow an attacker to bypass authorization controls and gain root access to a susceptible device. The vulnerabilities, a pre-authentication authorization bypass vulnerability and a command i...

Google Warns LLMjacking Attacks Are Costing Some Enterprises Up to $1 Million in Cloud Charges

Source: The Hacker News

> Google on Monday warned that threat actors are hijacking enterprise access to Large Language Models (LLMs) to fraudulently leverage expensive computing resources and AI services. The tactic is called LLMjacking, a form of resource hijacking adapted for the LLM era, where an attacker obtains an API k...

cPGuard Update Channel Hijacked to Backdoor Linux Servers and Collect Password Hashes

Source: The Hacker News

> An attacker broke into the update system of the cPGuard security tool on November 2 and used it to send a malicious script to customers' Linux servers. The script installed a backdoor and collected password hashes and other sensitive files from servers that ran it, cPGuard maker OPSSHIELD said in an...

Red Hat Patches 9.8-Rated Linux TCP RCE Flaw While Ubuntu Releases Fixes for Testing

Source: The Hacker News

> Fixed kernels for a use-after-free vulnerability in the Linux kernel's IPv4 TCP code are now available for Red Hat Enterprise Linux 8, 9, and 10, while Ubuntu's fixes for its three newest long-term-support releases remain in its opt-in testing channel with no date for a regular update. The flaw, tra...

The 4 Elements of Exposure Prioritization and How to Operationalize Them

Source: The Hacker News

> Your team is remediating more vulnerabilities than ever, yet your breach risk has barely changed. You’re spending too much time and effort on exposures attackers may never exploit, while higher-risk exposures sit, waiting in the queue. Gartner®’s report on exposure prioritization states that fewer t...

Russia-Aligned Gorbag Hackers Exploit WinRAR Flaw to Deploy Data-Stealing Malware

Source: The Hacker News

> A Russia-aligned threat actor known as Gorbag has been observed using simple information stealer malware in attacks targeting Ukrainian organizations. "Active since at least February 2025, the group has focused exclusively on Ukrainian targets, with a clear preference for law enforcement and justice...
