[\$] Recent work in memory tiering

Source: *LWN.net*

Tiered-memory systems are built with multiple types of memory, each of which has different performance characteristics. In addition to the usual DRAM, a tiered system might also provide faster high-bandwidth memory or slower CXL memory. On these systems, the placement of memory allocations has a sig...

Audacity 4.0 released

Source: *LWN.net*

Version 4.0 of the Audacity audio editor has been released. Notable changes in this release include a rewritten interface using Qt, ability to save user-interface layouts as "Workspaces", improvements in working with audio clips, and a new .aup4 project format. The release is not fully feature-compa...

Security updates for Thursday

Source: *LWN.net*

Security updates have been issued by AlmaLinux (freerdp, go-fdo-server, golang-github-openprinting-ipp-usb, kernel, kernel-rt, nodejs:24, perl-DBI, and php), Debian (firefox-esr, libapache2-mod-auth-openidc, and libass), Fedora (dracut, exiv2, firefox, freerdp, gvfs, mingw-expat, mingw-gstreamer1, m...

CRN - AI Has Changed Open Source Security, Says Red Hat CEO Matt Hicks
Red Hat CEO Matt Hicks discusses how AI has transformed open source security, emphasizing the need for better patching and transparency. Lightwell aims to help counter AI-powered mass vulnerability exploitation by accelerating ope...

The last mile problem in agentic AI: Why tool calling reliability is harder than it looks

Source: *Red Hat Blog*

Most of the attention in agentic AI goes to the agent's reasoning capabilities. The model can figure out the right plan, break a goal into steps, and decide what to do

next. Far less attention is given to the last step of that process, actually executing the action the model decided on. This “last m...

The architecture of autonomy: How ING built a future-proof tech strategy

Source: Red Hat Blog

I recently sat down with Marco Eijsackers, ING’s Global Head of Tech Strategy, at their headquarters in Amsterdam. Serving over 40 million customers worldwide with an enterprise tech team of thousands of engineers, ING faces a core question shared by many enterprise IT leaders: How do you build a fl...

Plex Urges Immediate Updates After Patching Multiple Undisclosed Security Flaws

Source: The Hacker News

Plex is urging users to update their instances to the latest version following the release of an update that patches multiple security flaws. The fixes are available in Plex Media Server 1.43.3 and Plex Desktop 1.115.0. The streaming media service did not elaborate on what those issues are, but said...

Google Releases Chrome Update to Patch Actively Exploited V8 Zero-Day

Source: The Hacker News

Google on Thursday released security updates to patch 12 vulnerabilities, including one that has come under active exploitation in the wild. The high-severity vulnerability, tracked as CVE-2026-85046 (CVSS score: 8.8), has been described as a type confusion bug in V8, Chrome's JavaScript and WebAsse...

GPT-6 Astra Scores 100% on ExploitBench as OpenAI Blocks PoC Exploit Requests

Source: The Hacker News

OpenAI on Thursday officially unveiled GPT-6 Astra, which it described as the "world's most intelligent and aligned model." The development comes days after the artificial intelligence (AI) company said the model had reached the "Critical" cybersecurity capability threshold under its Preparedness Fr...

ThreatsDay: CEO Phishing Kits, 5K Dropbox Account Hacks, OAuth Traps + 17 More Stories

Source: The Hacker News

The worst part is how normal these attacks look. A call from IT. A shared file. A trusted app. A simple request to click "Allow." Why break in when someone might open the door? That idea runs through this edition. Attackers use real tools, fake login pages, old account links, and software guides tha...

Critical Cisco Nexus 9000 Flaw Lets Unauthenticated Remote Attackers Run Code as Root

Source: The Hacker News

Cisco has released patches to address a critical security flaw affecting 10 Silicon One-based Nexus 9000 switches that could allow an unauthenticated, remote attacker to execute code as root, alongside an IOS XR hardening release bundling 7 umbrella CVEs, 2 of which are rated 9.8, with no workaround...

BraZetsu Malware Turns Compromised Windows Hosts Into Criminal Marketplace Inventory

Source: The Hacker News

Cybersecurity researchers have disclosed details of a sophisticated Python-based Windows malware framework called BraZetsu that fuels an underground marketplace commercializing access to compromised hosts. "Unlike the standard infostealer model, BraZetsu is a comprehensive master toolkit that empowe...

Thomson Reuters Court Software Breach May Have Exposed SSNs and Sealed Data

Source: The Hacker News

Thomson Reuters disclosed on Wednesday that an unauthorized party obtained files from C-Track, the court case management platform sold by its West Publishing Corporation unit, in March 2026, affecting courts in 11 U.S. states, the U.S. Virgin Islands, and Ontario, Canada. West Publishing said it dis...

US Becomes Top Target in RMM Phishing Campaign Spanning 46 Countries

Source: The Hacker News

An RMM phishing campaign initially associated with Canadian targeting due to its use of Canada Revenue Agency (CRA) tax forms as lures has turned out to be part of a broader campaign spanning 46 countries. Around 45% of observed activity was associated with the United States, making it the campaign'...

Attackers Turn Trusted Node.js Runtime Into Malware Delivery Tool in Targeted Attacks

Source: The Hacker News

Threat actors are leveraging the trusted Node.js JavaScript runtime in multiple cyber attacks as a way to deploy malicious payloads. According to a new report published by the Symantec Threat Hunter Team today, the attack method has been put to use in attacks targeting government departments, techno...

Shai-Hulud's Reach Just Grew to 469 Credential Locations. Here's What That Means

Source: The Hacker News

In early August, GitGuardian researchers found that a recent Shai-Hulud infostealer worm variant had evolved to scan for credentials across 469 locations across developer environments, Continuous Integration/Continuous Deployment (CI/CD) tooling, cloud configurations, and even AI tool configs. Earli...

Pegasus Zero-Click Spyware Exploit Infects Serbian Student Movement Member's iPhone

Source: The Hacker News

The iPhone belonging to a member of Serbia's student protest movement was infected with NSO Group's Pegasus spyware, according to new findings from the Citizen Lab in collaboration with the SHARE Foundation. "Our analysis confirmed that an iMessage zero-click exploit was used to infect the device wi...
