[\$] Python's two modules for random numbers

Source: *LWN.net*

Python's random and secrets modules both include utilities for obtaining random values, but only one of them is suitable for generating passwords and security tokens. For much of Python's history, random was used for passwords and tokens anyway, despite documentation that called it unsuitable for cr...

[\$] Last rites for Gentoo's Chromium package

Source: *LWN.net*

Chromium , the open-source upstream project for Google's Chrome web browser, is the browser of choice for many Linux users. It has also gained a reputation as being difficult for Linux distributions to package and build : Chromium has a complex build system, the project bundles many of its dependenc...

OpenSSH 10.6 released

Source: *LWN.net*

Version 10.6 of OpenSSH has been released. The announcement notes that the OpenSSH team has been receiving a large number of AI-assisted security bug reports. " We very much welcome these reports, especially when combined with human triage, analysis, test-cases and particularly when accompanied by p...

Security updates for Tuesday

Source: *LWN.net*

Security updates have been issued by AlmaLinux (gd, gimp, kernel, kernel-rt, libpcap, librabbitmq, mariadb-connector-c, osbuild-composer, ruby:2.5, and sudo), Debian (libmodule-cpanfs-analyse-perl, libpng1.6, libreoffice, roundcube, ruby-omniauth2, and sabnzbdplus), Fedora (0install, alt-ergo, apron, b...

Red Hat OpenShift: Enabling a resilient 5G autonomous edge for Telenor with AxyomCore

Source: *Red Hat Blog*

5G networks are increasingly deployed as cloud-native platforms, enabling network functions to run consistently across central datacenters, regional sites,

and the far edge of the network. This distributed model supports autonomous edge architectures, where traffic can be processed locally and essen...

How Red Hat's support AI assistant contributes to accelerating enterprise support

Source: Red Hat Blog

In enterprise support, speed and clarity matter most. Yet, when a recurring issue or standard inquiry arises, the primary bottleneck is rarely a lack of technical know-how, but workflow friction. Gathering initial diagnostic logs, searching across disconnected knowledge bases, cross-referencing prod...

M2: Episode 1 (or, Asahi Linux on M3)

Source: Asahi Linux Blog

It's been a while since we did a blog post outside of the progress reports, and today's as good an occasion for one as any; support for M3 series machines has now been merged into the installer. In other words, Asahi Linux now officially supports Macs with an M3 series SoC! Linux support for M3 seri...

Anthropic Expands Claude Access for Vetted Cyber Teams as Glasswing Finds 129,000 Flaws

Source: The Hacker News

Anthropic on Tuesday said it's expanding a program that allows vetted cybersecurity professionals to test its advanced artificial intelligence (AI) models with reduced safeguards and blocking classifiers, as the company claimed its Project Glasswing initiative uncovered at least 129,000 verified sof...

100+ Compromised Websites Use Fake Cloudflare Checks to Deliver LunexStealer

Source: The Hacker News

The Computer Emergency Response Team of Ukraine (CERT-UA) has identified more than 100 compromised websites that have been injected with malicious JavaScript to serve an information-stealing malware called LunexStealer (aka Psychedelic Stealer). The activity, which was observed by the agency in Sept...

Fake ChatGPT, Gemini, and Claude Ad Portals Capture Credentials and MFA Codes

Source: The Hacker News

Cybersecurity researchers have disclosed details of a "human-operated phishing platform" that impersonates advertising products for artificial intelligence (AI) chatbots like Google Gemini, Anthropic Claude, OpenAI ChatGPT, Perplexity, Meta Muse, and Manus. The products, which claim to offer campaig...

Linux Backdoors Impersonate Email Security Tools to Evade Detection in Korea and Taiwan

Source: The Hacker News

Linux backdoors targeting telecom and network appliances in South Korea and Taiwan have been disguising their traffic as email services and seemingly legitimate processes to blend in and evade detection. Threat actors are known to name their malicious software after a legitimate operating system com...

LibreOffice and OpenOffice Flaws Let Malicious Spreadsheets Run Code Without Macro Warnings

Source: The Hacker News

A malicious spreadsheet can make LibreOffice and Apache OpenOffice run an attacker's code as soon as the file is opened, security researchers have shown. There is no warning first, of the kind either program shows before it runs a macro. The attack works only when the program's Java support is enabl...

Wikimedia Says OpenAI Agents Tried to Compromise Etherpad and Use Wiki Tools as Proxies

Source: The Hacker News

The Wikimedia Foundation, which hosts Wikipedia, has confirmed that it has discovered activity by rogue OpenAI agents on its platforms, including unsuccessful efforts to compromise Etherpad, a public note-taking tool, and edit Wikipedia pages. "The unauthorized bot activities included edits to our w...

Welcome to the Jungle: What We Found Inside 15,465 Public MCP Servers

Source: The Hacker News

In 2024, MCP (Model Context Protocol) set out to become the USB-C of AI: one standard for connecting models, agents, and IDEs to tools and data. The protocol delivered. Thousands of developers built servers, and enterprises plugged them into agent workflows. The ecosystem around it fell short. Earli...
