[$] LWN.net Weekly Edition for October 29, 2026

Source: LWN.net

> Inside this week's LWN.net Weekly Edition: Front : Python JIT; Kernel clean up; Rust panics; Future Rust features; Northstar browser; 7.4 merge window; Smaller kernel stacks. Briefs : KeePassXC 2.8.0; Redox ring buffers; Rust in systemd; Quotes; ... Announcements : Newsletters, conferences, security...

A report from the LPC sched_ext microconference

Source: LWN.net

> The Linux Plumbers Conference blog has a report from the sched_ext microconference held in Prague. Three main topics dominated the discussions Priority inversion and how to handle it in sched_ext : lock holder and lock waiter preemption, time slice extension, and making proxy execution work together...

[$] The campaign to push Northstar into Linux distributions

Source: LWN.net

> There is not a broad selection of mature, open-source web-browser engines for Linux users. Most of the browsers available for Linux are based on one of just three projects: Chromium's Blink , Firefox's Gecko , or WebKit . A new entrant would generally be seen as a welcome alternative, but the recent...

Redox OS ring buffers project summary

Source: LWN.net

> The Redox OS project, which is a Unix-like microkernel-based operating system written in Rust, has published a report on the work that it has done in the last year to implement io_uring-like I/O . Last year, the Redox team received a grant to develop io_uring-like Ring Buffer support at the system t...

Security updates for Wednesday

Source: LWN.net

> Security updates have been issued by AlmaLinux (emacs, thunderbird, and xdg-dbus-proxy), Debian (bind9, openjdk-21, pdns, php-mongodb, and thunderbird),

> Fedora (brotli, chromium, clevis, eog, flatpak, ghostscript, kernel, libinstpatch, libreswan, mingw-freetype, mingw-gstreamer1, mingw-gstreamer1-pl...

How Atos uses Red Hat AI to build smaller, specialized models for sovereign AI

Source: Red Hat Blog

> For an enterprise, AI sovereignty starts with this primary requirement: Retain control of its own data and infrastructure. But as organizations move from experimenting with AI to deploying it in real business processes, control over the models themselves has become increasingly important. This inclu...

Building for tomorrow on Red Hat OpenShift

Source: Red Hat Blog

> IT leaders today must balance core operations to run smoothly while rapidly transforming infrastructure to drive new business value. From navigating budget constraints and complex multicloud environments to accelerating developer productivity and integrating AI, the pressure to modernize without ris...

F-Droid 2.0 - The Biggest Update In Years

Source: Mental Outlaw

> In this video I discuss the biggest update to F-Droid in years, better search features and a more modern looking user interface. My merch is available at https://based.win/ Subscribe to me on Odysee.com https://odysee.com/@AlphaNerd:8 ₿ Help Support the Channel by Donating Crypto ₿ Monero 45F2bN...

Linux is Wild: AI Agents, Rust Drivers, 10-Second Kernel Builds & New Desktops

Source: SavvyNik

> Big week for Linux as Rust continues to be more widely used language in Linux and open source projects.. we also get 10 Second Kernel builds and AI coming for Linux. KDE and GNOME also have major updates this week. Let's review this weeks Linux and open source news. My Linux Bundle is here: https:...

Cisco Patches Actively Exploited ASA and FTD VPN Flaw That Can Crash Firewalls

Source: The Hacker News

> Cisco has released patches to address a high-severity security flaw in Secure Firewall Adaptive Security Appliance (ASA) Software and Secure Firewall Threat Defense (FTD) Software that it said has been exploited in the wild. The vulnerability, tracked as CVE-2026-76418, is rated 8.6 on the CVSS scor...

GitHub Launches npm Firewall to Block Malicious Packages Before Installation

Source: The Hacker News

> GitHub has announced that it's introducing a new package firewall as a preview to block installation of suspicious npm packages during installation time. "The firewall inspects both metadata requests and package downloads for signs of malicious activity, acting as an install-time policy gate," GitHu...

Attacker Tried to Exploit Alpine Linux’s GitLab via CVSS 10.0 Flaw Its Ruby Left Open

Source: The Hacker News

> An attacker tried to exploit a critical GitLab vulnerability on the Alpine Linux project's own GitLab server a week after GitLab released a fix, Alpine Linux said on 28 October. The flaw, CVE-2026-97229 (CVSS score: 10.0), can let an attacker run code on a GitLab server through a crafted regular exp...

Hackers Exploited Cisco SD-WAN Flaw to Plant Malware Built to Steal Encryption Keys

Source: The Hacker News

> Hackers exploited a critical Cisco Catalyst SD-WAN flaw, fixed in February, to plant custom malware inside the systems that control an organization's SD-WAN network. The malware, called KeyDrift, is designed to copy the keys that encrypt traffic between sites and store them for later use, Cisco Talo...

China-Linked Hackers Exploited VMware ESX Zero-Day to Reduce Audit Trail Visibility

Source: The Hacker News

> The U.S. Cybersecurity and Infrastructure Security Agency (CISA) on Wednesday added a security flaw impacting Broadcom VMware ESX to its Known Exploited Vulnerabilities (KEV) catalog, after CrowdStrike revealed that it had been weaponized by a China-nexus threat actor known as Warp Panda in attacks...

Attackers Exploit PHP2Shell Flaws in Internet-Exposed Palo Alto Networks Management Interfaces

Source: The Hacker News

> Palo Alto Networks on Wednesday warned that threat actors are exploiting the recently patched PHP2Shell vulnerabilities against publicly-accessible management interfaces. "Active exploitation has been observed targeting the Palo Alto Networks management interface exposed to the internet," the networ...

Volt Typhoon Used Covert Silent Train Network in Four Zero-Day Exploitation Campaigns

Source: The Hacker News

> The China-nexus cyber espionage group known as Volt Typhoon has been attributed to a now-disrupted covert access network dubbed Silent Train that has been put to use for zero-day exploitation and strategic access. "First identified in late 2023, Silent Train uses rotating chains of compromised SOHO,...

Google to Allow One-Tap Android App Installs From Approved Third-Party Stores Outside U.S.

Source: The Hacker News

> Third-party Android app stores can now apply to Google for permission to install apps with one tap, without Android's usual confirmation screens, and to update them in the background. To qualify, a store must pass identity checks and send Google its full catalog, along with every new app and update,...

Researcher Reveals How Logic Bugs Alone Cracked Microsoft Edge in $175,000 Pwn2Own Win

Source: The Hacker News

> A chain of logic flaws, with no memory corruption, can turn a malicious web page into code running on a Windows computer outside Microsoft Edge's sandbox, a security researcher has shown. Orange Tsai of DEVCORE published the full method on October 28, five months after the chain won $175,000 at the...

PHP2Shell Attack Roots 25 Servers, Breaches U.S. Government-Affiliated Network

Source: The Hacker News

> Cybersecurity researchers have disclosed details of what appears to be an artificial intelligence (AI)-assisted attack orchestrated by a suspected China-nexus threat actor that has leveraged the PHP2Shell vulnerabilities to breach exposed systems. The activity, which was observed on October 25, 2026...

Hackers Target Critical Oracle E-Business Suite RCE Flaw Days After Security Patch

Source: The Hacker News

> Threat actors are beginning to probe for a newly patched critical vulnerability in Oracle E-Business Suite (EBS), according to threat intelligence firm Defused Cyber. The vulnerability in question is CVE-2026-101767 (CVSS score: 9.8) , a case of improper authentication in the Oracle Application Obje...

Critical 16-Year-Old UEFI Flaw Can Run Code Before Secure Boot on Network-Booting Servers

Source: The Hacker News

> A critical 16-year-old flaw in EDK II, the open-source code that most hardware makers use to build UEFI firmware, can allow an attacker to run code on a machine before its operating system loads, but only while the machine is booting over the network. UEFI firmware is the software that runs first wh...

Wazuh and AI for Enhanced SOC Workflows

Source: The Hacker News

> Artificial Intelligence (AI) has become one of this decade's defining technologies. From healthcare and finance to manufacturing and education, organizations increasingly rely on AI to automate repetitive tasks, uncover patterns hidden within large datasets, and support faster decision-making. Cyber...

Adobe Fixes 8 Critical Campaign Classic Flaws Allowing Code Execution and Security Bypass

Source: The Hacker News

> Adobe has released patches to address multiple critical security flaws in Campaign Classic that, if successfully exploited, could result in arbitrary code execution, security feature bypass, and privilege escalation. The list of eight vulnerabilities is as follows - CVE-2026-104351 (CVSS score: 9.9)...

American Organizations Under Attack: Skyw4lker Device Code Phishing Campaign Exposed

Source: The Hacker News

> Modern phishing campaigns can compromise American businesses without relying on traditional credential theft. Attackers can abuse legitimate cloud services, authentication mechanisms, and trusted business workflows to gain access to corporate accounts while leaving fewer obvious signs behind. ANY.RU...
