[\$] Looking forward to Git 2.56 — and 3.0

Source: *LWN.net*

The Git source-code management system is at the core of development processes worldwide, so changes, especially incompatible changes, are of great interest to the developers involved. The Git 2.56 release, which can be expected around the end of September, is currently available in release-candidate...

Systemtap 5.6 released

Source: *LWN.net*

Version 5.6 of the Systemtap tracing tool has been released. BPF LSM hooks and XDP packet-processing probes for the --bpf runtime, BTF-based kernel.tracepoint probes, statement execution tracing, a new @enumname() operator, richer runtime error context, dyninst hardware watchpoints, modern systemd s...

Security updates for Friday

Source: *LWN.net*

Security updates have been issued by AlmaLinux (.NET 10.0, coreutils, kernel, libevent, libsoup3, microcode_ctl, perl-Net-DNS, postgresql18, postgresql:16, postgresql:18, tomcat, and unbound), Debian (bind9, chromium, libapache2-mod-auth-openidc, nginx, xz-utils, and zip), Fedora (chromium, freeipmi...

Beyond OCR: Achieving 98% billing accuracy with GroundX and Red Hat OpenShift AI

Source: *Red Hat Blog*

In the enterprise world, document extraction has been stuck in a 20-year rut. For decades, companies have relied on a fragile assembly line: OCR to convert pixels to text, templates to find fields, and a team of human reviewers to fix the inevitable 30% error rate. When a utility provider changes a f...

Critical Pre-Auth RCE in Orkes Conductor Workflow Platform Exploited in the Wild

Source: *The Hacker News*

A critical vulnerability impacting Orkes Conductor is being actively exploited in the wild, according to Fortinet. The vulnerability in question is CVE-2026-58138 (CVSS v3.1 score: 9.8/CVSS v4 score: 9.3), which relates to a case of unauthenticated remote code execution. "Orkes Conductor 3.21.21 bef...

Google Gemini Broke Into Real Company Systems After Security Test Domain Mix-Up

Source: *The Hacker News*

Google's Gemini model has become the latest artificial intelligence (AI) system to access the internet and break into other companies during a cybersecurity evaluation. The development was first reported by The Wall Street Journal. The incidents occurred in May 2026 as part of a test run conducted b...

CrowdSec Says TanStack npm Attack Led to Copy of 170 Private GitHub Repositories

Source: *The Hacker News*

An attacker copied about 170 of CrowdSec's private GitHub repositories on May 22 using the account of an employee who had just left, CrowdSec said on September 18. The French security company had kept his GitHub access open. CrowdSec says his laptop was compromised in May's supply chain attack on Ta...

CISA Flags Three Linux Kernel Vulnerabilities Exploited in the Wild

Source: *The Hacker News*

The U.S. Cybersecurity and Infrastructure Security Agency (CISA) on Friday added three security flaws impacting the Linux kernel to its Known Exploited Vulnerabilities (KEV) catalog, citing evidence of active exploitation. The vulnerabilities are listed below - CVE-2025-39682 (CVSS score: 9.8) - An...

Public Exploits Released for Four Linux Kernel Flaws That Enable Local Root

Source: *The Hacker News*

A security researcher has released working exploit code for four Linux kernel flaws that each let a local user gain root, the highest level of access on a machine.

Kernel maintainers have fixed all four over the past few weeks, so a system running an up-to-date kernel is not affected. But the exploi...

New WordPress Click2Shell Flaw Forces Theme Installs, Can Chain to Code Execution

Source: The Hacker News

WordPress today released patches to fix a new set of vulnerabilities in its core software, one of which could allow a crafted web link, opened by a logged-in administrator, to install a theme from the official WordPress.org directory without anyone clicking Install. The security firm pwn.ai, whose r...

Transparent Tribe Deploys New Rust Backdoor Using Private GitHub Repositories for C2

Source: The Hacker News

The Pakistan-aligned threat group tracked as Transparent Tribe (aka APT36 and Earth Karkaddan) has been attributed to a fresh set of cyber attacks targeting government and defense entities in India and Afghanistan. The attacks, per Zscaler ThreatLabz, involve the use of previously undocumented tools...

Microsoft Patches CVSS 10.0 Azure AI Foundry Flaw Enabling Unauthorized Privilege Escalation

Source: The Hacker News

Microsoft has released fixes for a maximum-severity security flaw in Azure AI Foundry that could be exploited to achieve privilege escalation. No customer action is required. The vulnerability, tracked as CVE-2026-85889, carries a CVSS score of 10.0. "Missing authentication for critical function in...

An Abandoned CDN Domain Was Re-Registered. Thousands of Sites Still Call It.

Source: The Hacker News

In July 2025, someone registered a domain that used to belong to a content delivery network. The CDN had been wound down years earlier, and the domain it served assets from was allowed to expire. What it had not lost were its callers. Thousands of websites, code repositories, and documentation pages...

Plugin4Shell Lets Repository Owners Swap Pinned Plugin Code Across Four AI Coding Agents

Source: The Hacker News

A flaw in four widely used AI coding agents lets someone who controls a plugin's code repository swap the plugin an agent installs for a malicious one, even when

the agent locked that plugin to a specific reviewed version, security firm Air Security said on Thursday. The firm said Anthropic has patc...

WeaselBiscuit Stealer Spreads via 13 npm Packages to Harvest Chrome Extension Storage

Source: *The Hacker News*

Cybersecurity researchers have discovered a cluster of 13 npm packages that have been found to deliver a previously undocumented JavaScript stealer codenamed WeaselBiscuit. The new malware family, per OpenSourceMalware, exhibits functional overlaps with two malware strains associated with the Democr...
