GNU Core Utilities 9.12 released

Source: [LWN.net](#)

Pádraig Brady has announced GNU Core Utilities (coreutils) version 9.12. " There have been 288 commits by 16 people in the 21 weeks since 9.11 ". New features include an -A option for uname which labels all output, as well as adding awareness of the failfs and nullfs filesystem types to stat and tai...

[\$] Lessons learned as the Debian Project Leader

Source: [LWN.net](#)

What is it like to be a Debian Project Leader (DPL), or a former one? According to Andreas Tille, who stepped down this year after two consecutive terms as DPL, you'd have to be one to know. At the recent MiniDebConf in Winterthur, Switzerland , Tille spoke about what he learned while serving as DPL...

Emacs arbitrary code execution flaw

Source: [LWN.net](#)

Sean Whitton has announced that the original fix for an arbitrary code execution flaw in Emacs (CVE-2024-53920) was incomplete. Bas Alberts discovered that viewing or editing untrusted files in modes other than Emacs's Lisp mode can also result in arbitrary code execution. This problem affects all...

Security updates for Monday

Source: [LWN.net](#)

Security updates have been issued by AlmaLinux (389-ds-base, apr-util, coreutils, freerdp, git-lfs, glib2, gstreamer1-plugins-base, kernel, libkcapi, nginx, nodejs:22, nodejs:24, osbuild-composer, perl-YAML-Syck, postgresql16-postgis, ruby, ruby4.0, ruby:3.3, and vim), Debian (jbig2dec, kamilio, ng...

More than 9,000 patches total in the seven stable kernels for Monday

Source: [LWN.net](#)

Greg Kroah-Hartman has announced the 7.2.6 , 6.18.52 , 6.12.110 , 6.6.157 , 6.1.188 , 5.15.221 , 5.10.270 stable kernels. According to Kroah-Hartman , this

batch may set a record for the number of patches with more than 9,000 in total between them. There are more than 1,800 patches in 7.2.6 alone. U...

Modernizing Microsoft SQL Server: Choosing the right path with Red Hat

Source: Red Hat Blog

Modernization is often presented as a destination: Move an application to containers, adopt Kubernetes, and become cloud-native. Reality and appetite are usually more nuanced than that. They start with existing infrastructure, business-critical databases, established processes and applications that...

From fine-tuned model to cheaper and faster inference: Speculator training on Red Hat OpenShift AI with Kubeflow

Source: Red Hat Blog

Your organization spent months fine-tuning a large language model. Maybe it's a 70 billion parameter model trained on internal medical records, legal documents, or customer support transcripts. It's accurate. It's unique. It's yours. Now it's deployed in production, serving real users, and burning th...

From bare metal to diverse AI revenue streams: Navigating the GPU cloud platform challenge

Source: Red Hat Blog

For the past 2 years, the GPU conversation was about supply. Could you get the hardware? How much? How fast? That conversation has shifted, and a growing number of operators now have GPUs in hand, or on order, and they're facing a different problem entirely. Operators are looking at how to turn rack...

AutoRAG advances in Red Hat OpenShift AI 3.5

Source: Red Hat Blog

Building a retrieval-augmented generation (RAG) pipeline is no longer a hurdle for many enterprise AI teams. The real issue is optimizing it once it's built. Between finding the right chunking strategy, tweaking embedding models, and aligning generation parameters, developers are often left to guess...

LiteSpeed Enterprise Flaw Could Let One Hosting Account Gain Root Access on a Shared Server

Source: The Hacker News

A critical vulnerability in LiteSpeed Web Server Enterprise could let a low-privilege website user gain root access on a shared-hosting server, cPanel warned in an advisory published on September 14. On such servers, many customers' sites run on a single machine, and an attacker with one of those ho...

Cisco Secure Email Gateway Flaw Exploited in the Wild, Enables Root Command Execution

Source: The Hacker News

Cisco has warned that a new critical vulnerability impacting AsyncOS Software for Cisco Secure Email Gateway has come under active exploitation in the wild. The vulnerability, tracked as CVE-2026-76461, carries a CVSS score of 9.8 out of a maximum of 10.0. It has been described as a case of insuffic...

China-Linked Hackers Exploit Chrome-Windows Zero-Day Chain to Deploy GRIMWEDGE

Source: The Hacker News

A Chinese threat actor has been attributed to a spear-phishing campaign that exploits recently patched security flaws in Google Chrome and Microsoft Windows to deliver a malicious JavaScript backdoor called GRIMWEDGE. Volexity, which is tracking the threat cluster under the moniker UTA0560, said the...

New DDRop Attack Breaks Intel TDX and AMD SEV-SNP Confidential Computing

Source: The Hacker News

Researchers have disclosed a new hardware attack, called DDRop, that breaks the memory protection in Intel and AMD confidential computing by silently dropping writes to a server's memory, so the processor keeps reading old encrypted data as if it were current. The attack requires an attacker who alr...

3BB Attacker Used MeshCentral Backdoor for Root Access, Targeted Subscriber Credentials

Source: The Hacker News

An attacker was operating inside the network of 3BB, one of Thailand's largest broadband providers, and maintained remote control of internal machines using a legitimate management tool called MeshCentral, threat intelligence firm Hunt.io said. The company uncovered the intrusion by examining a serv...

Telegram Desktop Flaw Lets Hidden JavaScript Exfiltrate Messages From HTML Exports

Source: The Hacker News

A flaw in Telegram Desktop let a bot's message plant hidden JavaScript inside chats that users exported to HTML files, security researchers at ExPatch said in a writeup published on September 12. In Telegram, the message looked ordinary, with a link button, and the script ran only when someone opened...

Red Heron Exploits Gitea RCE to Compromise 13 Organizations Across Six Countries

Source: The Hacker News

A suspected Chinese threat actor tracked as Red Heron has been attributed to the rapid exploitation of a recently disclosed security vulnerability in Gitea to compromise internet-facing instances as part of a multi-national campaign. "Red Heron scanned 1,386 Gitea instances across seven countries and...

WordPress Adds Automated Plugin Reviews to Block High-Risk Updates Before Distribution

Source: The Hacker News

WordPress has announced it's launching an automated security review for every release of a plugin before it's distributed through the WordPress.org update API so as to analyze it for potential security issues and ensure there are no risks involved. "New plugins are reviewed before they enter the directory..."

Weekly Recap: Rogue AI Agents, WeChat Worm, PaperCut Attacks, AI Espionage, and Rootkits

Source: The Hacker News

AI keeps showing up in the wrong places. Attackers are using it to speed up exploits, test defenses, and automate more of the job. Some models are also crossing lines on their own. That is not a great combination. The rest of the week is more familiar: old bugs still working, fresh exploit chains, etc...

AI Changed the Exposure Problem. Validation Needs to Change With It.

Source: The Hacker News

There's a lot of noise around AI and cybersecurity right now. What's actually important is far simpler, if often lost in the hubbub. Vulnerability discovery is getting faster and happening at a much greater scale, while defenders still have to work out which findings actually deserve their action. I...
