Linux

OpenShot 4.0 released

Source: *LWN.net*

Version 4.0 of the OpenShot video editor has been released. OpenShot 4.0 has arrived, bringing some of the biggest creative workflow upgrades in our history. You can now record your screen, webcam, microphone, and system audio directly into a project. You can correct and grade footage with color whe...

Netdev 0x1A videos and slides are now live

Source: *LWN.net*

The Netdev 0x1A conference was held in Rome, Italy from July 13 through July 16. Conference organizer Jami Hadi Salim has let us know that the videos and slides for all sessions are now available. Topics include Linux QUIC, shared memory socket transport, eBPF-based DDoS protection, and more.

[\$] The rest of the 7.3 merge window

Source: *LWN.net*

By the time Linus Torvalds released 7.3-rc1 and closed the merge window for this release, 15,267 non-merge changesets had been pulled into the mainline repository. That is the second-highest commit count for an -rc1 release in the kernel's history; only the 6.7-rc1 release, which included nearly 3,0...

Security updates for Monday

Source: *LWN.net*

Security updates have been issued by Debian (kernel, libarchive, libdbi-perl, libnet-dns-perl, librabbitmq, roundcube, starlette, and xrdp), Fedora (bluez, postgresql16-anonymizer, pyOpenSSL, python-cryptography, python-pynitrokey, and rust-h2), Gentoo (Chromium, Google Chrome, Microsoft Edge, Opera...

Progress Report: Linux 7.2

Source: *Asahi Linux Blog*

Linux 7.2 has been released! That was fast. Let's dive in to yet another Asahi Linux progress report. We've got a lot of interesting developments for you today, so

make yourself a cuppa and enjoy. Think Different... again The Apple Silicon platform's power management infrastructure is complicated. Res...

Progress Report: Linux 7.1

Source: Asahi Linux Blog

Linux 7.1 is now here, and of course with it comes another progress report. We've got M3 progress, Apple bugs, and more! Welcome back Master Boot Record When you long-press the power button on your Mac to bring up the boot picker (or use the Startup Disk application), what you see listed as Asahi is...

Progress Report: Linux 7.0

Source: Asahi Linux Blog

After almost three years of 6.x series kernels, Linux 7.0 is finally here. That means it's also time for another Asahi progress report! Automate Everything Users of alternate distros and keen-eyed individuals may have noticed some changes to the Asahi Installer. After almost two years, we finally go...

Progress Report: Linux 6.19

Source: Asahi Linux Blog

Happy belated new year! Linux 6.19 is now out in the wild and... ah, let's just cut to the chase. We know what you're here for. The big one Asahi Linux turns 5 this year. In those five years, we've gone from Hello World over a serial port to being one of the best supported desktop-grade AArch64 platfo...

Progress Report: Linux 6.18

Source: Asahi Linux Blog

Linux 6.18 has released, and we have a bit to talk about for this holiday season progress report! More upstreaming madness Last time, we announced that the core SMC driver had finally been merged upstream after three long years. Following that success, we have started the process of merging the SMC'...

Progress Report: Linux 6.17

Source: Asahi Linux Blog

Another upstream kernel release means it must be time for a progress report! The patches keep coming As always, upstreaming continues. The highlight of this cycle is finally landing the SMC core driver, after discussions on the mailing list going all the way back to 2022! Along with the core driver,...

Progress Report: Linux 6.16

Source: Asahi Linux Blog

With Linux 6.16 now out in the wild, it's time for yet another progress report! As we mentioned last time, the Asahi and Honeykrisp Mesa drivers have finally found their way upstream. This has resulted in a flurry of GPU-related work, so let's start there. No missing nuts in this Flatpak For quite s...

Progress Report: Linux 6.15

Source: Asahi Linux Blog

Linux 6.15 is right around the corner, which means it's time for another progress report! We have been pretty busy behind the scenes and we have some exciting developments to share with you all. Fedora Asahi Remix 42 Release Last time, we announced that Fedora Asahi Remix 42 was close to release. It...

Progress Report: Linux 6.14

Source: Asahi Linux Blog

As March draws to a close and Linux 6.14 nears release, now is a good time to provide you all with our first major progress update since taking the lead on the project. Going forward, we hope to keep these updates in sync with upstream kernel releases. We feel that this is a natural cadence given th...

Passing the torch on Asahi Linux

Source: Asahi Linux Blog

With a heavy heart, we announce the resignation of Asahi Linux founder Hector Martin (marcan). His statement is on his blog. Asahi Linux brings Linux to Apple Silicon, supporting audio, webcams, graphics acceleration, and more. As the remaining developers, we are taking this as an opportunity to bui...

Beyond Gaming: X11 bridging in muvm

Source: Asahi Linux Blog

Hi everyone! We've just shipped a really cool update to our x86/x86-64 emulation stack on Asahi Linux, and I wanted to share what we've been working on. As of today, non-game apps are now usable! Cisco Packet Tracer running on Fedora Asahi Remix Native graphics in VMs As you might remember from our...

AAA gaming on Asahi Linux

Source: Asahi Linux Blog

Gaming on Linux on M1 is here! We're thrilled to release our Asahi game playing toolkit, which integrates our Vulkan 1.3 drivers with x86 emulation and Windows compatibility. Plus a bonus: conformant OpenCL 3.0. Asahi Linux now ships the only conformant OpenGL®, OpenCL™, and Vulkan® drivers for this...

Vulkan 1.3 on the M1 in 1 month

Source: Asahi Linux Blog

Finally, conformant Vulkan for the M1! The new “Honeykrisp” driver is the first conformant Vulkan® for Apple hardware on any operating system, implementing the full 1.3 spec without “portability” waivers. Honeykrisp is not yet released for end users. We’re continuing to add features, improve perform...

Conformant OpenGL 4.6 on the M1

Source: Asahi Linux Blog

For years, the M1 has only supported OpenGL 4.1. That changes today – with our release of full OpenGL® 4.6 and OpenGL® ES 3.2! Install Fedora for the latest M1/M2-series drivers. Already installed? Just `dnf upgrade --refresh`. Unlike the vendor’s non-conformant 4.1 drivers, our open source Linux driv...

New in Fedora Asahi Remix

Source: Asahi Linux Blog

We’re very proud to have released the first stable release of Fedora Asahi Remix not too long ago, and now it’s time to go over everything we’ve been up to. You may have wondered what’s up with the radio silence for the past few months. The answer is that we’ve been busy cramming in as many features...

The first conformant M1 GPU driver

Source: Asahi Linux Blog

Conformant OpenGL® ES 3.1 drivers are now available for M1- and M2-family GPUs. That means the drivers are compatible with any OpenGL ES 3.1 application. Interested? Just install Linux! For existing Asahi Linux users, upgrade your system with `dnf upgrade` (Fedora) or `pacman -Syu` (Arch) for the latest...

Our new flagship distro: Fedora Asahi Remix

Source: Asahi Linux Blog

You’ve all been waiting for it, many of you have guessed, and now, as announced at Flock To Fedora, it’s time to make it official: The new Asahi Linux flagship distribution will be Fedora Asahi Remix! We’re confident that this new flagship will get us much closer to our goal of a polished Linux expe...

OpenGL 3.1 on Asahi Linux

Source: Asahi Linux Blog

Upgrade your Asahi Linux systems, because your graphics drivers are getting a big boost: leapfrogging from OpenGL 2.1 over OpenGL 3.0 up to OpenGL 3.1!

Similarly, the OpenGL ES 2.0 support is bumping up to OpenGL ES 3.0. That means more playable games and more functioning applications. Back in Decem...

Paving the Road to Vulkan on Asahi Linux

Source: Asahi Linux Blog

Hello everyone, Asahi Lina here! As you probably know, I've been working together with the rest of the Asahi Linux team on open source GPU drivers for Apple Silicon platforms. It's been a wild ride! Just at the end of last year we released the first version of our drivers, after many months of reve...

Apple GPU drivers now in Asahi Linux

Source: Asahi Linux Blog

Hello everyone! We're excited to announce our first public Apple Silicon GPU driver release! We've been working hard over the past two years to bring this new driver to everyone, and we're really proud to finally be here. This is still an alpha driver, but it's already good enough to run a smooth de...

Tales of the M1 GPU

Source: Asahi Linux Blog

Hello everyone, Asahi Lina here! marcan asked me to write an article about the M1 GPU, so here we are~! It's been a long road over the past few months and there's a lot to cover, so I hope you enjoy it! What's a GPU? You probably know what a GPU is, but do you know how they work under the hood? Let...

Updates galore! November 2022 Progress Report

Source: Asahi Linux Blog

Time for another overdue progress report! This month's update is packed with new hardware support, new features, and fixes for longstanding pain points, as well as a new bleeding-edge kernel branch with long-awaited support for suspend and the display controller! If you're new to Asahi Linux, check...

M2 is here! July 2022 Release & Progress Report

Source: Asahi Linux Blog

UPDATE / NOTE: M2 machines have been fully supported and stable for a long time now. If you are reading this article today, this in no way represents the current state of support for M2 machines. Just install normally. Welcome to another long overdue progress report! As usual, things have been busie...

The first Asahi Linux Alpha Release is here!

Source: Asahi Linux Blog

It's been a long while since we updated the blog! Truth be told, we wanted to write a couple more progress reports, but there was always "one more thing"... So, instead, we decided to take the plunge and publish the first public alpha release of the Asahi Linux reference distribution! We're really exc...

Progress Report: October-November 2021

Source: Asahi Linux Blog

Whoops, things got so busy we ended up skipping a month! A lot has been going on in kernel land over the past couple of months, so we hope you enjoy this combined October-November progress report! M1 Pro/Max joins the family At the end of October, Apple launched the next generation of Apple Silicon:...

Progress Report: September 2021

Source: Asahi Linux Blog

It's been a busy month! We've had a lot of movement in kernel land, as well as some tooling improvements and reverse engineering sessions. At this point, Asahi Linux is usable as a basic Linux desktop (without GPU acceleration)! The ground had been shifting until now, but we're seeing drivers settle...

Progress Report: August 2021

Source: Asahi Linux Blog

It's been a long time since the last update! In all honesty, the first Progress Report set the bar a little bit too high, and I found it difficult to sit down and put together monthly reports that would do it justice. So, going forward, we're going to be providing shorter-form updates while striving...

Progress Report: January / February 2021

Source: Asahi Linux Blog

Welcome to the first Asahi Linux Progress Report! In this series we'll be taking a page from the Dolphin playbook and giving you monthly updates on the progress of the project. Bringing up support for a new system-on-chip on Linux is no small task! I hope this series will be educational to everyone...

What's Happening In KDE Remote Desktop - Improved Unattended Mode and More

Source: David Edmundson's Blog

Remote desktop has been one of the weaker areas of the transition to Wayland. There's a lot of software written exclusively for X that has a direct Wayland equivalent. Within KDE, we already have a Plasma-native RDP and VNC solution for Wayland, but we're aware that it hasn't yet reached the level w...

Wayland pain points - kgamma

Source: David Edmundson's Blog

In the feedback about dropping X11 support, one very surprisingly common comment is from users saying they "need" kgamma, a simple tool that allows the user to adjust the gamma, red, blue and green that gets drawn to the screen operating directly on the X server. On our Wayland session we have colou...

Techpaladin are hiring!

Source: David Edmundson's Blog

If you've been around KDE, you've probably heard of Techpaladin Software We're a consultancy that works almost exclusively on KDE, improving KDE upstream while delivering the features and functionality our clients need. We're growing and looking for more developers to join the team. We're after expe...

EX-11: Prepping for Plasma's Last X11-Supported Release

Source: David Edmundson's Blog

When we first announced the transition to Plasma Wayland, one of Martin's slides from stated, "It's done when it's done!" That talk was 15 years ago! Nothing in software is never truly "done", but as announced previously we are finally at a point where we're ready to retire the X11 and put all our f...

Update on KDE Home Automation (KIOT)

Source: David Edmundson's Blog

This is a effectively a guest blogpost where I, as usual, take the credit for the work someone else has done. Last year ago set out making a home automation <--> Desktop Linux bridge over the Christmas holidays. The idea is that if you're using home automation your PC that you're in front of has ... C...

Setting up distributed compilations with sccache

Source: David Edmundson's Blog

I hate waiting for compilations. For day-to-day it may only be a minute or two, but once you start doing another task, the context switching distracts from what you were doing before and breaks everything up. Life is too short to be waiting for computers. Obviously the first answer is to have a fast...

Introducing QtVarlink

Source: David Edmundson's Blog

I'm writing this blog in the very very early stages of development because I'm 50% sure someone will link me to some existing library that Google failed to find.

Varlink Varlink is an IPC mechanism that is gaining popularity in a few places across Linux. It's very simple, JSON blobs over a socket te...

Upcoming changes to Activities in Plasma 6.5

Source: David Edmundson's Blog

Activities' future is a bit unclear at the moment. It overlaps with functionality provided by other services and the user story for how it fits into the desktop is unclear at best. However we also have to acknowledge that some people use activities to create a workflow that works for them. Rather th...

A Roadmap for a modern Plasma Login Manager

Source: David Edmundson's Blog

Plasma's login experience is an area that we know requires some improvement — it works OK in the basic case, but it's very barebones and doesn't handle anything beyond that. As a complete desktop experience, it's our job to provide support for the edge cases too. What we want Great out-of-box experi...

Adding Home Automation to KDE

Source: David Edmundson's Blog

About Home Automation is mostly, as the name implies, about automation. The machine you're in front of all work-day has an awful lot of useful information that can be useful in your home management. I have a script lower my blinds if I turn on the camera during the afternoon as otherwise there's an...

X Has Shut Down Nitter

Source: Mental Outlaw

In this video I discuss how X (the platform formerly known as twitter) sent cease and desist letters to the operators of nitter.net, xcancel, and other various twitter front end alternatives and claimed that scraping twitter and then serving up posts for people to view on other platforms without X's...

How Ad Blockers Work

Threat actors associated with Aurora (aka Aur0ra) ransomware have been observed using SpaceX's artificial intelligence (AI)-powered coding assistant Cursor to break into target networks, according to findings from CloudSEK and Gambit Security. The two independent analyses are based on exposed infras...

Securing Claude Code: The New Compliance API, Local Visibility, and Identity Governance

Source: The Hacker News

Claude Code reads files, runs shell commands, invokes MCP tools, and acts through the credentials available on a developer's machine. Anthropic's new Compliance API endpoints give security teams their clearest view yet into that activity. They also expose a larger problem: activity logs alone cannot...
