[\$] Stabilizing Rust's never type

Source: *LWN.net*

A function's return type is supposed to indicate the kind of data that it produces. Rust's "never" type, which is denoted by an exclamation mark (" ! "), is the type the language uses to mark a function that never returns and other places where a value can never occur. For a long time, the never typ...

Jellyfin 12.0 released

Source: *LWN.net*

Version 12 of the Jellyfin media-management system has been released. Notable changes include database performance improvements , an upgrade to FFmpeg 8.1 for media transcoding , as well as better handling of book and comic media . See the release notes for the web client and server for a full list...

Security updates for Tuesday

Source: *LWN.net*

Security updates have been issued by AlmaLinux (expat, git-lfs, grafana-pcp, kernel-rt, python3.14-cryptography, redis:6, skopeo, and xmlrpc-c), Debian (jbig2dec and strongswan), Fedora (baresip, chirp, chromium, corosync, emacs, GitPython, libre, libsoup3, nsd, perl-Net-OAuth, and perl-XML-Bare), M...

From Livestream To Library: Publishing Flock To Fedora's Session Recordings

Source: *Fedora Magazine*

Intro After months of good old fashioned struggle with Google Drive and YouTube Studio, we were finally able to prepare the video sessions from the 2025 and 2026 Flock To Fedora event livestreams. These are now released to our YouTube and PeerTube communities. This article describes the details of t...

The context wall: What happens when your AI agent hits the GPU memory ceiling

Source: *Red Hat Blog*

Every model has a physical limit to how much it can hold in active memory at once. When production workloads hit that limit, they hit the context wall, and the failure is silent. An AI model's context window is the amount of text it can hold and reason over at a given time. Every token in the window...

Red Hat named a Leader in the 2026 Gartner® Magic Quadrant™ for Container Management for the fourth consecutive year

Source: Red Hat Blog

For the fourth consecutive year, Red Hat has been recognized as a Leader in the Gartner® Magic Quadrant™ for Container Management. We're thrilled by this recognition and believe it represents continued validation of Red Hat OpenShift's strong execution and strategy for delivering an industry trusted...

NVIDIA BlueField security and acceleration arrive on the Red Hat AI Factory with NVIDIA and Red Hat OpenShift

Source: Red Hat Blog

Agentic AI inference and 5G RAN workloads are pushing data center networking to its limits, yet up to 30% of host CPU power is wasted simply routing packets and enforcing security policies. When infrastructure services run directly on host CPUs, they create an "infrastructure tax" – consuming valuable...

Better together: Red Hat Enterprise Linux system roles and Red Hat Ansible Automation Platform

Source: Red Hat Blog

Managing Red Hat Enterprise Linux (RHEL) at scale requires consistent, repeatable configuration across hundreds or thousands of hosts. Doing this by hand means encoding the details of every subsystem into your own automation, including installing packages, editing configuration files, restarting ser...

Accelerating modern virtualization infrastructure in 9 months

Source: Red Hat Blog

It's no surprise that many organizations are reevaluating their existing virtualization platforms due to a variety of factors, including but not limited to rising virtualization costs and disruptive licensing changes. However, replacing a traditional virtualization platform with an identical hypervi...

Chrome V8 Zero-Day Exploited in the Wild Enables Code Execution Inside Sandbox

Source: *The Hacker News*

Google on Thursday released updates to patch 230 security vulnerabilities, including one that has come under active exploitation in the wild. The medium-severity vulnerability, assigned the CVE identifier CVE-2026-87491 (CVSS score: N/A), has been described as an out-of-bounds bug in V8, Chrome's Ja...

New cPanel Flaw Lets a Hosting Account With Mail Privileges Run Code as Root

Source: *The Hacker News*

cPanel has patched a flaw that it says lets a single hosting account take control of an entire server. An authenticated account holder with mail-related privileges can create files of their choosing on the server through EmailTrack and, from there, run code as the root user. cPanel published the adv...

F5 BIG-IP APM Malware Injects a PHP Web Shell Into Memory, Evading Disk Scans

Source: *The Hacker News*

Malware linked to break-ins at F5 BIG-IP Access Policy Manager appliances hides a PHP web shell in memory instead of in a file on disk, Sophos said in an analysis published on September 7. When Apache loads any of the three appliances' own PHP scripts, the malware adds the web shell to the copy held...

Researcher Drops New Microsoft Defender PoC Showing ShieldBreak Patch Can Be Bypassed

Source: *The Hacker News*

The security researcher known as Chaotic Eclipse has dropped a proof-of-concept (PoC) for yet another zero-day in Microsoft Defender. The vulnerability, codenamed ShieldCrash, is assessed to be a patch bypass for CVE-2026-69414 (CVSS score: 7.8), also called ShieldBreak, which the researcher reporte...

SAP Patches CVSS 10.0 Kernel Flaw Enabling Unauthenticated Remote Code Execution

Source: *The Hacker News*

SAP has released security updates to address multiple vulnerabilities, including a maximum-severity flaw in SAP Extended Passport (EPP) Processing that could have

a severe impact on the confidentiality, integrity, and availability of the application
The vulnerability, tracked as CVE-2026-44756 (CVSS...

Microsoft Patches Record 974 Flaws, Including Two Exploited Windows Zero-Days

Source: The Hacker News

Microsoft on Tuesday broke Patch Tuesday records by addressing an earth-shattering 974 vulnerabilities spanning its software portfolio, including two flaws that it said have been actively exploited in the wild. These include 723 flaws in Windows, 111 in Office and Office 2016, 62 in SQL, and 22 in D...

N-able N-central Pre-Auth RCE Flaw Exploited in the Wild

Source: The Hacker News

The U.S. Cybersecurity and Infrastructure Security Agency (CISA) on Tuesday added a maximum-severity security flaw impacting N-able N-central to its Known Exploited Vulnerabilities (KEV) catalog, requiring Federal Civilian Executive Branch (FCEB) agencies to apply the fixes by September 11, 2026. Th...

Slim Spider Steals Crypto Custody Secrets From Brazilian Financial Institution

Source: The Hacker News

A previously undocumented financially motivated threat actor has been linked to attacks targeting Brazilian financial institutions since at least March 2026. Cybersecurity company CrowdStrike is tracking the Brazil-based activity cluster under the name Slim Spider. "The adversary demonstrates deep o...

Liquid Hackers Return 3,400 Bitcoin Taken via Elements Bug, Still Holding \$47M in BTC

Source: The Hacker News

Whoever took nearly 4,000 bitcoin from the Liquid Network on Sunday, September 6, returned 3,400 of it the next day, Bitcoin's public record shows. About 598.5 bitcoin has not come back. Liquid is a Bitcoin sidechain that holds real bitcoin to back a token called L-BTC. The network is still paused,...

ChatGPT Flaw Let a Planted Prompt Send a Victim's Gmail Data to Another Account

Source: The Hacker News

Check Point Research said in a report published today that a single instruction planted in a ChatGPT conversation could cause ChatGPT to quietly work for an

attacker while answering the user's question as usual. In the company's proof of concept, that hidden work read data from the user's connected...

Autonomous AI Agents Compromise Thousands of Credentials in Under Six Hours

Source: The Hacker News

Threat actors are continuing to leverage artificial intelligence (AI) to streamline their operations, with one financially motivated hacking group employing an autonomous, multi-agent attack framework to carry out a large-scale credential harvesting campaign within six hours. Google Threat Intelligence...

WeChat Zero-Click Worm Took Over Accounts on iPhone and Android via Incoming Calls

Source: The Hacker News

Researchers at the security firm Calif have built a worm that takes over a WeChat account via an incoming call and demonstrated it spreading among three test phones. The person being called does not have to answer or touch their phone for it to work, but the caller must already be one of their WeCha...

What It Took to Reach 1 Billion Build Manifests

Source: The Hacker News

In the last six months, Chainguard doubled its output from 500 million to more than 1 billion container build manifests. We also surpassed 3,000 unique container images and 675,000 image versions in our catalog. Those are the headline numbers, but I want to share what's actually behind them. The num...

FreeIPA Flaw Chain Lets Anonymous Clients Create Reusable Administrator Credentials

Source: The Hacker News

A flaw in FreeIPA lets a client that has never logged in create a Kerberos identity of its own choosing in the directory and end up in the administrators group, Red Hat says. FreeIPA is the system that determines who may log in across a Linux domain and maintains all identities in a 389 Directory Se...

Adobe Patches Magento Zero-Day Exploited to Deploy Rust Backdoor and PHP Web Shell

Source: The Hacker News

Adobe on Monday released security patches to address a maximum-severity flaw impacting Adobe Commerce and Magento Open Source that has come under

active exploitation in the wild. The vulnerability, now tracked as CVE-2026-75650 (CVSS score: 10.0), has been codenamed StyleSmuggler by Sansec, which di...

BengalSEO Poisons Bing Search Results to Deliver MayaBot and Tech Support Scams

Source: The Hacker News

Cybersecurity researchers have disclosed details of a sprawling search engine optimization (SEO) poisoning campaign that paves the way for malware deployment and tech support scams. The campaign, discovered by the DFIR Report in March 2026, has been codenamed BengalSEO. It has operated out of the In...
