[\$] Adding BPF to blk-iocost

Source: *LWN.net*

The scheduling of block I/O requests has long been a challenge for operating-system kernels. For many years, the performance characteristics of rotating drives meant that putting considerable resources into request ordering was worthwhile. In a world with fast, solid-state drives, scheduling is more...

Vondra: PostgreSQL development activity

Source: *LWN.net*

PostgreSQL contributor Tomas Vondra has published a blog post looking at development activity in the project, with data from the late 1990s to today. We're doing ~50 commits per week, give or take. In ~2010 we were doing maybe 25/week, and the trend seems to be a slow and consistent growth. The mont...

Security updates for Tuesday

Source: *LWN.net*

Security updates have been issued by Debian (network-manager-l2tp and urwid), Fedora (perl-Dancer2, perl-Data-Entropy, perl-DBI, perl-Protocol-HTTP2, podman-tui, rust-lru, and rust-lru0.16), Mageia (bzip2, cups-filters, libcupsfilters, libssh2, perl-Authen-SASL, perl-HTML-FormFu, tar, unzip, and zip...

CoreOS 45 Test Week

Source: *Fedora Magazine*

The Fedora CoreOS and QA teams are gearing up for Fedora 45, and we need your help! We are organizing a Fedora CoreOS Test Week starting on September 21, 2026. This event is a great opportunity for the community to test Fedora CoreOS (FCOS) based on Fedora 45 content before it officially reaches the...

Announcing Fedora Linux Asahi Remix 45 Beta

Source: *Fedora Magazine*

We are happy to announce the availability of Fedora Linux Asahi Remix 45 Beta. This pre-release will bring the freshly announced Fedora Linux 45 Beta to Apple

Silicon Macs. We expect to announce general availability of Fedora Linux Asahi Remix 45 in about a month. This will coincide with the overall...

Announcing Fedora Linux 45 Beta

Source: Fedora Magazine

Fedora Linux 45 Beta is here! On Tuesday, 15 September 2026 you can download or upgrade your systems from your usual spots to start enjoying what F45 has to offer early. How to get the beta release You can download F45 Beta, or our pre-release edition versions, from any of the following places: You...

The datacenter myth: Why sovereign AI demands a tenancy model, not just geography

Source: Red Hat Blog

There's a version of the digital sovereignty conversation that stops at geography: Put the servers in-country, keep the data inside the border, tick the box. It was never quite enough for cloud, and in a regulatory era that has shifted from "trust us" to "show us," it's definitively not enough for A...

Opening the black box: Profiling a secured agentic pipeline on Red Hat OpenShift AI

Source: Red Hat Blog

As enterprises move to autonomous agentic pipelines, 2 critical questions emerge: Can I add security to my agents without killing performance? And, Where should I focus optimization effort to get the most out of my agentic system? Most inference benchmarks test the model in isolation—a raw request to...

Fedora 45 Beta now available

Source: Red Hat Blog

Today, the Fedora Project is excited to announce that the beta version of Fedora Linux 45—the latest release of the free and open source operating system—is now available. Fedora Linux continues to serve as an innovation engine across the open source ecosystem, bringing the newest kernel enhancements...

Azure Red Hat OpenShift with hosted control planes is now available in public preview

Source: Red Hat Blog

Azure Red Hat OpenShift with hosted control planes is now in public preview. This new architecture can improve operational efficiency, increase cost savings, and accelerate deployment by having the control plane managed in an Azure account for your Azure Red Hat OpenShift service rather than your ow...

Achieving data sovereignty for SaaS with confidential containers and quantum-safe networking

Source: Red Hat Blog

Independent software vendors (ISVs) that host services in the public cloud face growing scrutiny from customers who need assurance that their data remains secure when processed outside their direct control. This often leads customers to demand that vendors deploy services on premise, within infrastr...

Attackers Exploit WooCommerce Wholesale Lead Capture Flaw to Plant PHP Web Shells

Source: The Hacker News

Threat actors are exploiting a critical security flaw in WooCommerce Wholesale Lead Capture, a premium WordPress plugin that has more than 6,000 active installs. "This vulnerability can be leveraged by unauthenticated attackers to upload arbitrary files, including PHP backdoors, and achieve remote c...

Active Exploitation Attempts Target WSO2 API Manager JWT Bypass With Forged Admin Tokens

Source: The Hacker News

A critical security flaw in WSO2 API Manager has come under active exploitation in the wild, according to findings from watchTowr. The vulnerability, tracked as CVE-2026-5430 (CVSS score: 9.8/10.0), is a case of improper verification of a cryptographic signature that could result in account takeover...

KREMLIN Banking Malware Hijacks Chrome and Edge to Steal Credentials and Session Tokens

Source: The Hacker News

Cybersecurity researchers have shed light on a previously undocumented Brazilian banking malware operation that delivers a toolkit called KREMLIN. Elastic Security Labs is tracking the activity under the moniker REF9334. Active since at least May 2025, the threat actor has used lures that impersonat...

Iranian Hackers Use Telegram-Controlled Malware to Spy on Dissidents and Journalists

Source: The Hacker News

Cybersecurity agencies in the United States, the United Kingdom, and the Netherlands have detailed a Windows malware that they say Iran's intelligence service uses to spy on dissidents, journalists, and activists around the world. The malware is controlled via the Telegram messaging app and can copy...

BambooToken Malware Uses MQTT to Control Windows and Linux Systems

Source: The Hacker News

Cybersecurity researchers have disclosed details of a multi-platform campaign that uses the Message Queueing Telemetry Transport (MQTT) protocol as a communication channel to control Windows and Linux systems. The emerging malware family, codenamed BambooToken, is assessed to be active since at least...

Human Attacker Exploits Marimo RCE, Reaches SSH Bastion in Eight Seconds

Source: The Hacker News

With artificial intelligence (AI) shrinking the window between vulnerability discovery and exploitation and lowering the barrier to entry for bad actors, new findings from Sysdig show that skilled human operators can move just as swiftly after gaining initial access. In one instance highlighted by t...

Attack Chains, Not Just Attack Surfaces: Why Testing Individual Techniques Misses the Point

Source: The Hacker News

Introduction Security teams have gotten pretty good at testing against what can hurt them. Can this EDR agent catch this payload? Will my organization fail the phishing simulation? Does this SIEM rule fire on this particular technique? And, in more mature organizations, this testing happens continuo...

Mass-Scanning Campaign Exploits Vite Flaw to Extract Cloud Credentials From Exposed Dev Servers

Source: The Hacker News

Cybersecurity researchers have disclosed details of a mass-scanning campaign that has targeted Vite deployments siphon sensitive data. The first is an automated effort aimed at internet-exposed Vite development servers that's designed to steal cloud credentials, configurations from Amazon Web Servic...

Show HN: Capsule - Single-file web apps that save their data into SQLite

Source: *Hacker News (Top 20)*

Hey HN, I always had the problem that building HTML pages is really simple now, but trying to save data required hosting it somewhere, and sharing it afterwards was not easy. Over the last few months, I've been building an app called Capsule (it's also the file extension name) written in Rust with T...
