[\$] LWN.net Weekly Edition for October 8, 2026

Source: *LWN.net*

Inside this week's LWN.net Weekly Edition: Front : Kernel bugs; Gentoo's Chromium package; Rust smart pointers; Sashiko; Charon; LAVD scheduler; Python random-number modules. Briefs : OpenSSH 10.6; RustConf recordings; Rust 1.99.0; Picard 3.0; Zig 0.17; Quotes; ... Announcements : Newsletters, confe...

[\$] Analyzing Rust programs with Charon

Source: *LWN.net*

Nadrieril is a long-time Rust contributor, and the maintainer of the rustc pattern-matching infrastructure. During his involvement with Rust, he has noticed a problem with the usability of the language: it is difficult to automatically extract information from a Rust crate for use with other tooling...

[\$] Evolving the LAVD scheduler from gaming to servers

Source: *LWN.net*

The extensible scheduler class , which enables the creation of custom CPU schedulers with BPF, has led to a burst of innovation in this area; the LAVD scheduler has, perhaps, been one of the most noteworthy schedulers to emerge. Though it was originally designed for gaming applications , the LAVD sc...

A new Raspberry Pi Desktop release is finally available for x86-64

Source: *LWN.net*

Simon Long has announced a long-awaited release of Raspberry Pi OS, based on Debian 13 ("trixie") , for x86-64 systems. We managed to find the time to update the Desktop for the Buster and Bullseye releases of Debian, but then we all just got too busy with other things, and, while we left the Bullse...

Security updates for Wednesday

Source: *LWN.net*

Security updates have been issued by AlmaLinux (bind, dovecot, freerdp, kernel, mariadb-connector-c, mod_auth_openidc, nodejs22, nodejs:22, sudo, and vim),

Debian (node-shell-quote, puma, rails, ruby-jwt, and suricata-update), Fedora (chromium, cockpit, flocq, freerdp, gappalib-coq, golang-x-mod, ht...

Podman Test Week: Help test the Rust-based common v3

Source: Fedora Magazine

The Podman and Fedora Quality teams are organizing a test week from Monday, October 12, through Sunday, October 18, 2026. We want your help testing common v3, the Rust-based container monitor used with Podman. If you use Podman, try the same containers and commands with common v3 and report any diff...

Framework Laptop 12 Arrives with Fedora Pre-installed

Source: Fedora Magazine

Recently, Framework announced their new Laptop 12, which optionally comes with the KDE Edition of Fedora Linux pre-installed. Framework's modular hardware has long captured the hearts of tinkerers, and many Framework users were already running Fedora Linux. Giving community members the option to unb...

3 reasons to attend Red Hat Summit:Connect 2026

Source: Red Hat Blog

Technology is moving faster than ever. From modernizing cloud infrastructure and virtualization strategies to keeping up with emerging enterprise AI capabilities, staying ahead requires more than reading documentation—it requires real-world context, hands-on application, and connection. That is where...

Zero CVEs at delivery: Why container security belongs in the supply chain

Source: Red Hat Blog

Back in 2010, I wrote a small web tool to generate random galactic sectors for a tabletop role playing game. It started as a Perl application, but these days it's a single, static Go binary with all of its assets compiled right into the executable. Thousands of game masters have used it, it runs qui...

Red Hat OpenShift Platform Plus bundle available on hyperscaler marketplaces

Source: Red Hat Blog

Note: This post was updated on October 7th with the latest information. Organizations using Red Hat OpenShift cloud services are increasingly seeking ways to extend their platform's capabilities with enterprise-grade security and data management capabilities. Red Hat OpenShift Platform Plus is availa...

How global service providers achieve virtualization migration at scale with Red Hat OpenShift Virtualization

Source: Red Hat Blog

As the virtualization market undergoes historic shifts, service providers worldwide are re-evaluating their infrastructure foundations. With changing licensing structures, per-core cost increases, and shifting vendor roadmaps, managed service providers (MSPs) and cloud service providers face pressin...

Breathing life into corporate innovation with IdeaBot

Source: Red Hat Blog

Enterprise technology leaders know that balancing reliable execution with breakthrough thinking is essential for long-term growth. Core product roadmaps excel at delivering steady, customer-driven enhancements to proven platforms. At the same time, sudden market discontinuities create opportunities...

Linux 7.3 Review: AI Chaos, MASSIVE Performance, GPU, CPU, and Rust Upgrades

Source: SavvyNik

We're exploring patches and merge requests as AI/LLMs are overwhelming maintainers. These are the patches submitted for the Linux Kernel 7.3 merge window. These include major improvements to performance, gpu, cpu, storage, memory and networking on Linux systems using the kernel. This in-depth review...

Wazza Phishkit Targets Banking, Government, and Manufacturing Across the US, EU, and Australia

Source: The Hacker News

Phishing kits are no longer limited to copying a familiar login page and waiting for a victim to enter credentials. Attackers are increasingly building filtering, session management, and traffic controls into the infrastructure that delivers the phishing page itself. ANY.RUN has identified Wazza, a...

16 Malicious Firefox Extensions Pose as Rabby and OKX Wallets to Steal Recovery Phrases

Source: The Hacker News

Cybersecurity researchers have discovered a cluster of 16 malicious Mozilla Firefox extensions that are capable of stealing cryptocurrency wallet recovery phrases

and private keys. "The extensions masquerade as wallet portals, desktop utilities, and browser tools, but their code intercepts recovery...

U.S. Offers Up to \$10 Million for Tips on Zhang Yu, Charged in HAFNIUM Hacks

Source: The Hacker News

The U.S. State Department is offering up to \$10 million for information leading to the identification or location of Zhang Yu, a Chinese national charged in the United States in connection with the 2021 Microsoft Exchange Server attacks known as HAFNIUM. The reward is for information leading to his...

MonsterCloud Owner Accused of Billing Over \$19M While Secretly Paying Ransoms to Decrypt Data

Source: The Hacker News

The U.S. Department of Justice (DoJ) on Wednesday announced charges against a 50-year-old U.S. and Israeli national for allegedly defrauding ransomware victims by secretly paying the attackers to obtain decryptors while claiming to use proprietary tools to recover their data. Zohar Pinhasi (aka Zack...

Tensorlake npm Package Compromised to Deliver Shai-Hulud Credential-Stealing Worm

Source: The Hacker News

The npm package known as "tensorlake," a TypeScript software development kit (SDK) for Tensorlake applications, sandboxes, and cloud services, was compromised as part of a ChainDrop / Shai-Hulud supply chain attack. The malicious version 0.5.144 "contains obfuscated malware that harvests credentials...

Attackers Hijack .gh, .sl, and .as Registries to Obtain Certificates for Google Domains

Source: The Hacker News

Attackers compromised three country-code top-level domains (ccTLDs) and obtained unauthorized HTTPS certificates for several Google domains, Google said on October 6. Google's own systems were not breached, but any domain ending in .gh (Ghana), .sl (Sierra Leone) or .as (American Samoa) was put at r...

Eight Malicious npm Packages Downloaded 40,767 Times Deliver Overlord RAT and Stealer

Source: The Hacker News

Cybersecurity researchers have disclosed details of a long-running npm supply chain malware campaign that pushes information stealers and remote access trojans (RAT) to compromised hosts. The campaign has been codenamed MALFEX by CloudSEK and Checkmarx. The activity is assessed to be the work of a l...

SonicWall Patches CVSS 10.0 Pre-Authentication SSRF Flaw in SMA1000 Appliances

Source: The Hacker News

SonicWall has released hotfixes for four flaws in its SMA1000 appliances, the gateways that give remote workers access to a company's network and applications. The most serious could allow an attacker without a login to send requests through the appliance and reach internal functions. SonicWall rate...

Unpatched Critical LMCache Flaw Lets Unauthenticated Attackers Run Code Remotely

Source: The Hacker News

A critical vulnerability in LMCache, open-source software that speeds up large language model (LLM) servers such as vLLM, lets an attacker run code on the cache server without logging in, and no fixed version is available. The flaw is in LMCache's multiprocessing mode, where the cache runs as a standal...

PoeLLM Malware Infects 3,400+ Servers to Expand Crypto Mining Botnet

Source: The Hacker News

Cybersecurity researchers are calling attention to a new malware family that has been observed targeting exposed artificial intelligence (AI) and large language model (LLM) infrastructure with an aim to deploy cryptocurrency miners and further expand the scale of the botnet. The financially motivate...

The Sixth Voice of the CISO Data Shows Cyber Risk Has Moved Inside the Workflow

Source: The Hacker News

The 2026 findings are not just a year-over-year shift. They mark the latest point in a five-year arc where resilience, AI governance, human risk, and board scrutiny are converging inside the systems where work actually happens. For years, the enterprise cybersecurity story has been told as a straigh...

FBI Warns FortiBleed Remains Active After Amassing 86,644 Fortinet Device Credentials

Source: The Hacker News

The U.S. Federal Bureau of Investigation (FBI) and Secret Service (USSS) on Tuesday warned that the FortiBleed credential harvesting campaign remains an active threat aimed at internet-facing Fortinet FortiGate firewalls and secure socket layer (SSL) virtual private network (VPN) gateways. "The camp...

Atlassian Data Center Flaw Draws Exploitation Attempts Within Two Hours of Public Details

Source: The Hacker News

Threat actors have begun to exploit a newly disclosed critical security flaw impacting Atlassian Data Center products that could allow access to sensitive files under certain conditions. The arbitrary file access flaw, tracked as CVE-2026-21589 (CVSS score: 9.3) affects multiple products, including...

What Is Agentic Pentesting? What It Proves, and Where It Stops.

Source: The Hacker News

If you're evaluating an agentic pentesting solution right now, you've probably heard the same pitch more than once: point it at a target, and it discovers, validates, and exploits attack paths autonomously, the way a real attacker would. That promise is worth taking seriously. It's also worth pressu...
