RustConf recordings

Source: *LWN.net*

The Rust Foundation has posted the recordings from RustConf 2026 in Montreal, Canada. Photos of the event are also available. LWN covered four talks from RustConf this year.

[\$] An update on the Sashiko patch-review system

Source: *LWN.net*

Patch review has long been one of the limiting constraints for the kernel project (and most others); there just aren't enough people to properly review all of the code that is submitted for inclusion. The Sashiko system, which uses a large language model (LLM) to generate reviews automatically, offe...

Picard 3.0 released

Source: *LWN.net*

Version 3.0 of the MusicBrainz Picard tag editor has been released. " This release brings many changes, including an upgrade to Qt6, a completely new plugin system, several improvements to the user interface, cover art processing, [International Standard Recording Code (ISRC)] submission and many...

Security updates for Monday

Source: *LWN.net*

Security updates have been issued by AlmaLinux (ghostscript, libvirt, and osbuild-composer), Debian (freecad, linux-6.12, node-lodash, pcre2, perl, php8.2, ruby-rack-session, wireshark, and xen), Fedora (assimp, budgie-control-center, budgie-desktop, budgie-desktop-services, budgie-desktop-view, chr...

BTRFS boot failure and easy GUI methods for system recovery

Source: *Fedora Magazine*

A few short how-to's with screenshots, showing easy ways to boot up off a USB live ISO and return back to previous points in time with BTRFS

Building zero trust networks with Red Hat Ansible

Source: Red Hat Blog

With artificial intelligence (AI) models now capable of discovering thousands of vulnerabilities in days and developing exploits in hours, organizations are moving from preventing to containing the breach. This requires enforcing least privilege across identity, secrets, network segmentation, and po...

Red Hat named a "Leader" in 2026 IDC MarketScape

Source: Red Hat Blog

We are thrilled to announce that Red Hat has been named a Leader in the 2026 IDC MarketScape for Worldwide Private and Hybrid Cloud Management with Automation. We believe this recognition from IDC MarketScape confirms what our partners already know: in a market where 88% of large organizations still...

Red Hat is named a Leader in IDC MarketScape: Worldwide Private and Hybrid Cloud Management with Automation

Source: Red Hat Blog

Red Hat has been named a Leader in the IDC MarketScape: Worldwide Private and Hybrid Cloud Management with Automation 2026 Vendor Assessment (Doc #US54644626e, June 2026). The IDC MarketScape noted, "Ansible Automation Platform's lightweight architecture and expansive ecosystem of certified content C...

MLOps for edge AI: Preparing AI models for deployment at the edge

Source: Red Hat Blog

When I started playing with AI models for edge computing use cases, everything went smoothly. But once I reached the "it works" point and started thinking about how to operationalize it, the whole thing became more complicated. I started to question how a trained model becomes something you can ship...

From AI pilots to production: How DH2i and Red Hat help customers run resilient, security-focused AI on Red Hat OpenShift

Source: Red Hat Blog

Building an AI application is a milestone; running it reliably against business-critical enterprise data is a challenge. As organizations transition retrieval-augmented generation (RAG) and AI assistants from the lab to production, the underlying infrastructure becomes the primary differentiator. To...

Google Pauses OSS Product Bug Bounty Rewards After Surge in Invalid Automated Reports

Source: *The Hacker News*

Google has stopped accepting product vulnerability reports through its bug bounty program for its open-source software. The change, in effect since October 1, means researchers can no longer submit security flaws in the code of projects such as Go, Angular, and Protocol Buffers there for a reward. R...

Critical Atlassian Flaw Lets Unauthenticated Attackers Read Known Files Across 8 Products

Source: *The Hacker News*

A critical flaw in 8 Atlassian Data Center products, which customers host themselves, allows an attacker with no login access to read specific files in each product's web application root directory. The attacker must already know a file's exact name and path and cannot list what the directory holds....

FBI Removes Accenture Contractor After Patch Failure Led to ShinyHunters Breach

Source: *The Hacker News*

The U.S. Federal Bureau of Investigation (FBI) has removed an Accenture contractor for their alleged role in a ShinyHunters-breach that led to the theft of personal details of thousands of bureau employees. That's according to a report from Reuters, citing two sources familiar with the matter. "To d...

Denmark Says Attackers Accessed CPR Data for 8.8 Million People via Company Account

Source: *The Hacker News*

Unauthorized parties have gained access to the names, addresses, and personal identification numbers of about 8.8 million people, living and dead, in Denmark's national population register, the country's digitalization ministry said on October 5. They used a private Danish company's lawful right to...

ClickFix Smuggles Payloads Through Browser Cache to Bypass Windows Run Limits

Source: *The Hacker News*

A new type of ClickFix attack is using compromised websites to trick users into executing a malicious payload cached in a web browser's cache. "Instead of

downloading and executing remote payloads like the typical attack pattern, in this attack, the websites pre-fetch a script payload into the brows...

Microsoft Exchange Flaw Lets Authenticated Attackers Read Other Users' Mailboxes

Source: The Hacker News

Microsoft has released out-of-band security updates to address a high-severity flaw in Microsoft Exchange Server that could allow an attacker to escalate privileges under certain conditions. The vulnerability, tracked as CVE-2026-96940, is rated 8.8 on the CVSS scoring system. "Weak authorization in...

Weekly Recap: NetScaler and FortiMail 0-Days, AI Coding Leaks, Spectre v2 and Ransomware Arrests

Source: The Hacker News

A blank field. A public repo. One reply to an email. A box left exposed. None of this sounds dramatic, which is partly the problem. This week's threats keep finding leverage in small things that were easy to overlook. There are actively exploited bugs in the mix, cleaner intrusion paths, smarter aut...

The Credential Layer Is Expanding Faster Than Security Teams Can See It

Source: The Hacker News

Every modern enterprise depends on credentials. This is how humans, systems, and now AI, all connect to data, services, and each other securely. GitGuardian helps secure that credential layer through three connected capabilities: Detect, Remediate, and Prevent. The journey starts with detection, bec...

Realtek Jungle SDK Exploit Attempts Deliver Cling Botnet With STUN-Based C2

Source: The Hacker News

Threat actors have been observed attempting to exploit a now-patched critical security flaw impacting the Realtek Jungle software development kit (SDK) to deploy a botnet malware called Cling. "Cling is notable not because it introduces a new propagation technique, but because it repurposes ordinary...
